ORACLE LIGHTING

20 YEARS OF INNOVATION.

Since 1999 ORACLE Lighting has been developing custom lighting solutions using the latest Lighting Technology. Our staff is not only trained on basic product knowledge, but also to understand the processes in which our products are built, the principals of how they operate, and the proper technique of installation.

Since we specialize in lighting (and only lighting) we are always happy to spend that extra bit of time explaining the principals of lighting and helping our customers understand what separates our products from some of the others out there.

For the past EIGHT years consecutively INC Magazine has listed ORACLE Lighting as one of the *fastest growing privately held companies* in the entire United States on the Inc.500-5000 List.

In 2012 ORACLE Lighting received a bronze American Business Award for "Consumer Products Company" of the year. In 2013 we were named "Small Business of the Year" by JEDCO, named "Exporter of the Year" by the U.S. Small Business Administration, and named a "Small Business Champion" by the U.S. Senate Committee for Small Business and Entrepreneurship awarded by the Committee Chair; Senator Mary Landrieu.

The resolute principals and solid foundation on which this company was founded has allowed organic growth at a rapid pace, yet we have always stressed that we can only be successful by delivering quality products at fair prices and respecting our customer base. We have consistently elevated our own standards by making a commitment constantly improve our products with the *latest* technology as our industry evolves. We use only premium-level LEDs, these are more expensive but have higher lumen-to-watt efficacy, are more dependable, and have a longer overall lifespan. We are committed to exceeding our customers' expectations & staying on the cutting edge of lighting technology.

PLATINUM RATED DATA

OVER 15,000 SKUs READY TO LOAD!

With ORACLE Lighting offering over 15,000 SKUs, we know how important it is to provide accurate and timely data to our customers. Being platinum status means ORACLE Lighting has provided every applicable data field in the SEMA Data Co-Op (SDC) score card. Platinum data provides nearly 60 PIES (product) fields and ACES (application & fitment) data, making it a complete set of information to build detailed product listings with descriptions, digital assets including images and videos, tariff codes and sales metrics. This data makes it easy for retailers to create impressive and informative product listings.

These information-rich product listings allow the consumer to gain a full understanding of what they are buying and how it will benefit them. According to SDC, end-users of the data are more likely to build listings from platinum suppliers than from suppliers with a lower data status.

ACES is the Auto Care Association Catalog Exchange Standard. The standard was established to standardize information for proper product selection and fitment. ACES drives how Year-Make-Model product searches and look-ups work.

PIES are Product Information Exchange Standards. The standard was established to define the attributes of the automotive products. These attributes include, but are not limited to: brand ID, description, price, dimensions, weights, NAFTA, UPC and HAZMAT.

PRE-ASSEMBLED HEADLIGHTS

Pre-Assembled headlights are great for customers that do not want to open their existing headlights to install a halo kit. These headlights come pre-assembled with ORACLE halos professionally installed. We offer these lights for almost every make and model and we are constantly adding new vehicles. Our Pre-Assembled Headlights have either Chrome or Black Headlight Housing depending on your choice. In addition to pre-assembled headlights we also offer matching halo fog-lights. Pair both of these items with an ORACLE wireless controller for a perfect lighting package.

ORACLE Pre-Assembled Headlights are similar to stock Factory Lights, complying with the applicable safety and function requirements of U.S. Department of Transportation's Federal Motor Vehicle Safety Standard 108 (FMVSS) and SAE.

RETROFIT PROJECTORS

TL 2.5" D2S BI-XENON RETROFIT PROJECTORS

The Acura TL Bi-Xenon Projectors are widely popular in HID retrofitting applications. These projectors are considered one of the best performing projector assemblies available on the market. The Acura TL projectors come with crystal clear ZKW-R lens. Instead of a "fuzzy" light dispersal, caused by low end lenses, these lenses create a distinct cut-off pattern (where the light output meets the top of the lens). Resulting in razor sharp and vibrant light.

Retracting bi-xenon mechanisms unleash a reliable and intense low/high beam. The threaded mounting shaft makes for ease of installation for many applications.

The 70mm H1 offers amazing light output, the most precise sharp cutoff line, and non-existent glare.

With its table-top light spread design, this projector is compatible with D2S and D2C bulbs, and produces a very sharp, attractive cut-off line (Vibrant band of colors across the top of light cut-off line). INTERIOR FLEX LED STRIPS

SIDE FIRING FLEXIBLE LED STRIP

The light output on these strips display sideways instead of forwards. Meant to be placed in areas where you don't want the led strip to be visible, but want the light to peek through. Good for tight areas and small enclosures. The side-firing LED strip is used in applications where the light needs to shine parallel with the mounting surface rather than perpendicular with the mounting surface like normal LED strip.

Part# 3801

LED Type:	Side Firing LEDs
Quantity:	Sold by the Foot or 200" Spools
Input:	Direct 12V Wiring
Wattage:	1.5W per Foot
Backing:	3M Adhesive
Waterproof Rating:	IP65
Customization:	Can be cut to smaller lengths
Warranty:	Lifetime

ORACLE LED strip maintains high-end double-layered P.C.B. circuit boards. Double Layer circuit boards have better heat dissipation and thermal properties which results in longer LED lifetime, durability, and overall reliability.

bridgelux®

INTERIOR FLEXIBLE LED STRIP

Our "interior" flexible strip is most commonly used on projects where the lights will not come in contact with water or moisture. The absence of the waterproofing material allows the strips to fit into tighter spaces, become slightly more flexible, and are less expensive than the waterproof version.

Part# 3802

Customization:	Can be cut to smaller lengths
Warranty:	Lifetime

ORACLE LED strip exclusively uses Bridgelux LEDs which have an excellent lumen-to-watt efficiency rating, have a very long lifetime, and are made in the USA.

EXTERIOR FLEX LED STRIPS

EXTERIOR FLEXIBLE LED STRIP - WHITE BACKING

Our waterproof LED strips have an IP65 rating and are suitable for exterior or outdoor applications and areas subjected to high heat. For the waterproofing material we use a high grade silicone rather than epoxy. The reason is that epoxy is not as flexible and tends to yellow over time. For your convenience we offer 2 different color circuit boards- white and black. This helps conceal the LED strips in different types of applications.

The integrated LED's inside the mirrors can be used as both turn signals and parking lights. An aspherical mirror is added for a wider field of view, so no visibility is compromised. These are plug & play design and hook right up to the factory harness to allow for full control over the mirror adjusters. The mirrors can be custom painted to match any factory GM color.

HID CONVERSION KITS

35W CANBUS HID BALLAST

Part# 5906

The key component of all HID ballasts is the "controller" which controls the functions from the initial ignition to continually ensuring the xenon gas inside the bulb stays ignited. The quality of every ballast starts with the controller inside. The new ORACLE 35W CANbus Ballast utilizes an ASIC chip controller.

24W BALLAST

Part# 5904

Commonly for HID Fog Light Bulb applications

XENON RECTIFIER

Part# 5903

Eliminates HID "Flicker" by stabilizing the input into the HID Ballast. Fits ALL Aftermarket HID Kits.

XENON CONVERSION KITS:

ORACLE Xenon Conversion kits were developed with strict standards and the latest technology available on the market. The new "Plug and Play" wiring makes this installation as simple as changing your headlight bulbs and simply plugging in the ballasts. ORACLE digital ballasts are equipped with new processors that have a startup of a much more efficient 6 amp compared to the industry standard 10 amp. The 2018 ballasts also have an ASIC control chip to make this ballast compatible with any vehicle and can correct most of HID installing issues such as fault indicator lights, and bulbs flicking during operation. These changes are what makes ORACLE HID Kits an even higher quality and once again increased the standards of what makes a "Premium" kit different from the others out there.

HEADLIGHTS ONLY

PERIPHERAL ILLUMINATION

Besides being functional, these LED Mirrors from ORACLE Lighting look great as well! The LED light bar is a custom design that features a total of 24 Cree XPE 1W LEDs. This gives the driver a total of 24W of LED power producing approximately 2200lm. Each unit has a 45° beam angle to optimize the driver's peripheral visibility, whether riding on the trail or in the desert. The housing material is made from rugged Poly-carbonate and bolts onto the vehicle using the factory mounts for easy installation. A set of anodized rock guards protects the LED acrylic lenses, which also houses the DBM Reflex LED optics. These efficient optics focuses the light for optimal visibility from the driver seat position.

CURVED LED LIGHT BARS

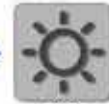

ORACLE Lighting now offers the CREE powered 50", 52", and 54" Light Bars in a Curved Housing Option. These LED light bars transform the common rectangular light bar style into a curved style, matching the curved styling of most vehicles and offering a wider light dispersion without sacrificing forward firing distance. These light bars are perfect for off-roaders needing both forward and peripheral light dispersal, while eliminating the necessity of adding multiple light bars for this desired effect. These light bars contain both flood and spot optics for optimal light dispersal.

SLEEK LED LIGHT BARS

ORACLE Off-Road Sleek LED Light Bars boast a slim design and the latest optical lenses on the market, 4D optics. These new optics allow for precision spot illumination with the least amount of light fall-off. Utilizing a separately designed fish eye lens, instead of a reflector, the new optics system captures the maximum amount of light emitted from the LED and projects it exactly where you need it.

OFF ROAD HID LIGHTING

High Intensity Discharge (HID) lighting is excellent for Off-Road applications. HID lights have no filament and can sustain vibration and impact better than incandescent and halogen lights. HID is also very efficient and produces six times the amount of light per watt as its incandescent counterparts. Our HID Off-Road lights are available in Spotlight and Floodlight configurations, two different styles, and three different sizes. Regardless of your Off-Road lighting needs, ORACLE has you covered!

Designed for use indoors and outdoors these highly efficient floodlights are an excellent replacement for security lighting, halogen floodlights, sodium floodlights, or for landscape lighting. LED FLOOD LIGHTING

LED Shop lights have many advantages over traditional halogen work lights. The LED versions are 10x as efficient as halogen, this means a 30W LED light would be equivalent to a 300W Halogen, that is some serious energy savings! LED shop lights also put out no heat which makes for a much more comfortable working environment.
