

**Read complete instructions
before installation!
Improper installation may
void warranty**

Tools needed
10mm Socket and ratchet
Phillips Screwdriver

Remove the two 10mm bolts
from the top of the light. Also
remove the phillips push pin
from the rubber flap.

Pull the flap to one side and
remove the 10mm bolt holding
the housing in place.

Pull the light straight out.

Remove the 3 light sockets by
twisting and pulling outward .

The small 194 bulb will need to be
removed from the socket.

Plug the 3 sockets into the back
of the new light.

Install your new light. Be sure to
line everything up correctly.
Replace your stock bolts and push
pin.

Check all functions of the light
before driving on the highway.
