## THE COMPANY

Being unique is an easy thing to want, but the practical application is hard to achieve. After years in the industry, the two founding partners of BMF Wheels were fed up with wheels that all looked the same, had no guts, and did not connect with customers. In 2007, BMF Wheels was founded on a commitment to a patent pending process, unique designs, and hard core branding. Since then, we continue to grow and bring new products to the lifted and leveled truck market. BMF Wheels pledges to our customers that we will never compromise on our designs, our brand or the attitude that comes with it. Our innovative manufacturing process combined with our brand appeal has provided BMF customers a means to express their specific lifestyle. Every product we build is driven to represent our customers individuality. This is what makes BMF Wheels a "True Original."

## WHEELS

## THE BMF PROCESS

### AGGRESSIVE GROUNDBREAKING DESIGN

BMF Wheels is a truly unique and performance-driven line of wheels for the off-road and lifted truck enthusiast. Every BMF Wheel is manufactured using a patent pending proprietary multi-axis CNC machining process. These cutting-edge innovations produce a true three-dimensional look that is second to none. All BMF wheels are engineered to exploit the longest and straightest rim lip possible, and are all TPMS sensor compatible to meet OE specifications.

### FITMENTS

Our fitments are absolutely perfect for an aggressive fit on lifted and leveled trucks using all-terrain and mud-terrain tires. There are six wheel designs to choose from in 17, 18, 20, 22 and 24 inch diameters. We have two basic programs in regards to fitment, EZ-Fit and negative offset. Our EZ-Fit program is designed for an aggressive look on primarily leveled vehicles but can work with a full suspension lift as well. EZ-Fit is available in 17x9, 18x9, 20x9 and 22x9.5 currently. Our negative offset offering is available in 20x10, 22x10.5 and 24x10.5 for full suspension lift packages.

## FINISHES

BMF Wheels come in three finishes for our customers to achieve the exact look they want for their lifted or leveled truck.

### STEALTH

STEALTH is a semi-gloss black painted wheel with CNC machined accents on the rim lip only. After machining, the wheel is clear coated in a semi-gloss clear automotive paint to lock in the machining and prevent the aluminum from oxidizing. There is no machining on the face of the wheel or the sides of the spokes. For those customers that lead a tactical lifestyle, STEALTH was made for them.

### DEATH METAL BLACK

"Death Metal" Black is our signature finish. It comes with a gloss-black finish and FULL CNC milling on the rim lip, face of the wheel and sides of the spokes. On some designs there is a BMF logo engraved on the spoke. After machining, the wheel is clear coated in a high-gloss clear automotive paint to lock in the machining and prevent the aluminum from oxidizing. This is the finish that set BMF Wheels apart from our competition since we founded the company!

### PVD (PHYSICAL VAPOR DEPOSITION)

PVD (Chrome) is a breakthrough process by which a chrome-like finish is achieved through "Physical Vapor Deposition." This gives our wheels a very bright luster and THREE-YEAR WARRANTY! All PVD wheels are machined using a FULL CNC milling process on all surfaces of the wheel. On some designs there is a BMF logo engraved on the spoke. The PVD process is then applied over the entire wheel to give our wheels a sharp, clean look.
