KONIG AMERICAN

For over 30 years Konig has been producing wheels for the streets, shows, track and off-road. Everyone at Konig takes a great deal of pride in developing the highest quality product available on the market today. Each wheel is designed with the most up to date and state of the art technology that represents decades of experience. Wheel after wheel and car after car, Konig continues to produce wheels that are second to none. Other companies may come and go but there is a reason Konig has remained a fixture in the automotive industry. Our commitment is to you, our valued customers, partners, and friends. Thank you for all of your support!

Flow Formed

Flow forming is one of the most advanced manufacturing technologies to enter the wheel industry. Flow Forming Technology involves the application of pressure to the inner barrel of the wheel, while spinning and after it has been casted. This process stretches and compresses the aluminum, which increases tensile strength. In this respect the process shares similar properties to those found in the forging process. The final product is lighter, stronger, has increased elongation, and a much greater shock resistance as well as an increased load capacity over regular cast wheels.

(The illustrations shown are approximate and for reference only)

1

2

3

THE FLOW-FORMED PROCESS APPLIES PRESSURE ON THE INNER WHEEL WHILE SPINNING AFTER CASTING

THIS PROCESS STRETCHES AND COMPRESSES THE ALUMINUM, WHICH INCREASES TENSILE STRENGTH

THE FINAL PRODUCT IS LIGHTER, STRONGER, HAS INCREASED ELONGATION, AND GREATER SHOCK RESISTANCE

FINISHED FLOW FORMED WHEEL - KONIG INTEGRAM
