

### ADVICS ROTORS

"Taking rotor manufacturing to the next level."

## ADVICS Brake Discs (Rotors)

ADVICS uses their extensive OE manufacturing expertise to manufacture safe and effective rotors. ADVICS's proprietary rotor designs allow the air to flow freely inside the rotors with the vanes creating a suction that removes hot air and gases. These USA manufactured rotors are constructed using the same materials and processes as the ADVICS original equipment rotors found on Toyota, Lexus and other well known vehicle brands.

## OE ADVANTAGE

### FEATURES & BENEFITS:

<b>More Stopping Power</b>	Formulated and engineered to provide high heat dissipation for maximum friction and overall braking performance.
<b>Carbon Content</b>	High Carbon evenly distributed through steel for consistent heat diffusion and better fade.
<b>High Temperature Tolerance</b>	Ensures thermal stability and optimized friction characteristics for durability and long-life.
<b>Expert Machining</b>	Precision and tight tolerances in the manufacturing process eliminate judders, vibration, and distortion to assure smoother stops. This also helps to assure a clean and cooler braking experience.
