

In 1999, advanced FLOW engineering was born.

What started as a dream and a passion for automobiles led us on this exciting journey. In the beginning, we had a vision for what an air filter should be and what you see is the result of that vision. From the filter media to the urethane frames to the seal design, no stone was left unturned. Our attention to detail is evident in our filters, and in every product we design and produce. Now in our 20th year, that same approach is carried through all our product lines. Our Cold Air Intake Systems, Exhaust Systems, and other product lines are second to none, all built in our 160,000+ sq. ft. facility in Corona, California, and we continue to grow. Exciting and recent acquisitions have expanded our portfolio into the Suspension and Tuning markets, allowing us to provide even more solutions and high-quality products for true automotive enthusiasts.

Our growth and continued success would not be possible without the right team of people. We share the same dream, vision, and passion for performance. This united front is what allows us to create such exciting and compelling products. From our design and engineering teams who create the product, to the manufacturing staff who build it, to all our support staff who manage the purchasing, sales, marketing, customer service, and accounting — everyone plays a key role in the success of aFe.

Thank you to our customers for your continued support of aFe and for celebrating with us in our 20th year in the automotive after-market. This, our 20th year catalog shows how far we've come and includes our full product line for you to see. This is what we do.

INNOVATE OR DIE

DRIVEN BY **RESEARCH & DEVELOPMENT**

Superior products are the foundation of aFe POWER.

We are in the business to create the most exciting, highly engineered products in the world.

Our products excel in every way — the installation, the fit, and the performance are benchmarks in the automotive after-market industry.

When you bolt on an aFe POWER product, you get more than just performance — you get perfection.

With full-time teams of engineers dedicated to specific product groups, our products are designed to fit a specific vehicle year, make, and model range.

Our extensive research and development programs put products to the test on our in-house dyno as well as on the street, the track, and off-road, to ensure performance improvements over stock.

PERFORMANCE AIR FILTERS

FLOW IS OUR MIDDLE NAME

Back in 1999, we set out to provide the ultimate air filter for OE replacement, racing, off-road, and universal applications. Today, our filters are the heart and soul of our industry-leading cold air intake systems.
