LETTER FROM THE EDITORS.

In this edition we look back to our roots in order to capture our passion for speed and customization. By flipping through these pages you will see reflected 28 years of intense experiences around the world, during which we have designed, developed and manufactured the best products and proposals in aerodynamics and sport accessories.

From the concept design to the distribution of our products, at Air Design we work driven by the dream of innovation. We hope this magazine to be a tool to share this motivation and to be used as a precious reference for your future personalization projects.

For "The Paint Shop", the most exciting thing is that there are no limits when it comes to exotic combinations, color or finish, reflections, or textures. What our finishes transmit resembles the beautiful sparkles of the sea in the sunset, as we incorporated higher-end technology with a finish that not only protects but also proclaims your personality.

The paint shop is born so that all the perceptions you have of the world of color can be put on your vehicle to take them wherever you desire. We reach the highest expression in painting and quality, in conjunction with our body kits, and with each element, we get

close to achieving the quality of a super exhibition car ready for daily use. With this, coming from the artistic medium of street art, with a great freedom of expressions in the environment of personalized cars. With painters, tinsmiths, polishers and a whole team of exceptional and capable professionals using the best technology, equipment, ovens and techniques. The detail of the work is so good that it represents what you want to express about your car with a personalized service, in addition to profession. With our Body Kits, born from artistic fusion, high-end technology, the dreams you have for your car, can all come true at The Paint Shop by Air Design. 🚗

BETTER WITH COLOR

LOW LIFE

Air Design Vehicle Personalization Center, Mexico City

Stance is a lifestyle, a cultural current that has been around for many years, starting with Hot Roads and its aerodynamic performance revolutionizing Lowriders with air suspension at birth. Nowadays, thanks to technology, this lifestyle can be incorporated into your daily car. This radically modifies the aesthetics of the car that highlights its characteristics and performance, framing the wheels that you put on, your Body Kit and the wonderful paint job, add more value and looks to your ride. 🇲🇽

THE SKATER

JETTA RACING A7 2019

The new Jetta A7 is the well deserved evolution of a classic icon to the contemporary world, Highlighting with its performance of the STREET motorsport symbols, meanwhile improving its aerodynamics and recovering the style of the 80's with it's splitters. The enormous diffuser and the abundant matte black surfaces, makes it a familiar car that does not forget its origins,

but that incorporates deserved advances that crown it in its category. In addition, this one is particularly equipped with its beautiful Rotiform gold honeycomb wheels that base their design on that specific generation, wide tires, and a new H & R suspension that stands out, even more, creating a new personality.

LOVE FREEDOM

YOU NEVER FORGET YOUR FAVORITE CAR
JETTA A6 2015- 2017

Never forget your favorite car. Since I joined the security forces I always wanted to make me a classic car that represented me. A friend of mine had a Jetta A3 VR6 that I really fell in love with, that car stayed in my head and became an ambition of mine. Over time I got a family of my own and I decided to buy the Jetta A6. By driving my car, it gave me a sense of freedom and an inspiration to modify it".

VW19D38 (2015- 2017)
Rear Spoiler with Diffuser

It had a very discreet color, so when changing my wheels for a 20" Rotiform VLK set, I looked for the most expressive color you could find while, at the same time, I put a pneumatic suspension to make the car have a very versatile style. With these additions to my car, the Body Kit showed off perfectly, giving my car a personality and dynamism.

Side Skirts Set

I travel with my car to the beautiful beaches of my country, enjoyed the roads, getting lost in some roads surrounded by nature. I take it on vacations and walk through streets surrounded by beautiful and elaborate graffiti, where the style of my car is integrated into the environment. It's a fulfilling feeling to see my car has become a dream come true.

Ask us For More Information
SPARCO Original Accessorie

Why did we change our original seats for Sparco?

A lot of you may wonder why we change the factory seats of our cars with Sparco seats. The vast majority of cars do not have seats that support a 4

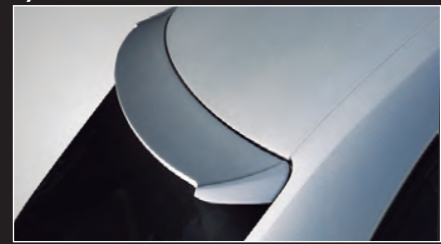

point belt, nor provide the safety or aesthetics that these seats can give. The Sparco seats are almost always much lighter than the original. Exchanging the

stock seats for these gives you a sense of security and control in a sporty handling. They also reduce distractions when experiencing the G forces of the car

while turning and they give you a greater sense of control over your car... Did we already mentioned the aesthetics?

This is the car that undoubtedly caused a revolution in Volkswagen. After having unveiled the new line of products that looked to the future, in conjunction with its partner the Golf, they were able to take some steps in the right direction. They imposed a large, elegant or sporty grill as the case may be, new technologies and refinement, Bi Xenon lights with the presence of LEDs that was quite an innovation in the market. It also comes loaded with a 2.5 VW 5-cylinder engine that did not leave anyone indifferent. Who knew that with very few modifications (such as a BBS and an Air Design Body Kit) it would be transformed into an unforgettable toy.

"I bought my Classic Jetta as it just came out, falling in love with the new style and the old acquaintance who renewed his skin. It was the perfect car for my family and I. I had so many ideas for its aesthetics, I wanted its appearance to be really sporty, with a drag car feel to it. After the first modification the real motivation started, installing Coilovers for the suspension, wide WCI wheels with special HOOSIER tires for ra-

ces. A Sparco racing seat gave that drag car aesthetic. Once I changed the engine for a VR6, along with a new exhaust pipe and an Air Design Body Kit wich gave it more aggressive look, it felt like a drag car. Several pieces were painted in The Paint Shop, combining matte and bright blacks with orange tones with the original Silver color of the car".

Front Bumper Competition I

Towards the late 90's and the beginning of the new 2000's, many new innovations and trends were set in place, especially in the world of personalized cars. This era capitalizes on the externalization of the personality of each driver and their cars. Skulls and LED headlights were popularized, and carbon fiber was accommodated in street cars incorporating new technologies. Iconic cars appeared thanks to some films that helped strengthen and increase the culture of personalizing your car that started back in the 40's with the Hot Rods.

VW07D13

Front Bumper Competition I

Las luces aparecieron de forma constante bajo los autos al terminar el día surgiendo esto del entorno nocturno de bares y antros con anuncios brillantes y luces de neón; y la estética de los autos se llevo a niveles insólitos con trabajos de pintura exclusivos, la modificación extrema de la carrocería, los enormes rines cromados, en fin, ¡toda una revolución de colores y emociones!

Este es el Jetta que refleja toda esa historia, un color verde Candy Electric combi-

nado con tonos negros, fibra de carbono en el cofre, rines cromados de 19 pulgadas, luces de neón blanco por fuera y por dentro, asientos Sparco luces en Leds, una fascia con grandes tomas de aire integradas al resto del body kit, nitrógeno en la cajuela y un sin numero de modificaciones performance para el auto, que sin duda alguna refleja con orgullo el estilo de vida tan increíble que, aun hoy después de tantos años, nos da alegría y emoción. 🏁

Neon lights appeared consistently under the Body from custom cars so when night time struck they would stand out. The aesthetics of the cars took to unusual levels with exclusive painting jobs, the extreme modifications of the bodywork, the enormous chromed wheels, in short, a whole revolution.

This is the Jetta that reflects all that history, with a candy electric green color combined with black tones, carbon fiber in the chest, 19-inch chrome

wheels, white neon lights on the outside and inside. It is also suited with Sparco racing seats, LED lights, a large Fascia air intake integrated to the rest of the body kit, nitrogen in the trunk and a number of performance modifications for the car. All the modifications to the performance and aesthetics undoubtedly reflects with pride the incredible lifestyle that, even today after so many years, it gives us joy and excitement. 🏁

BE YOURSELF

An idea emerged, the start of a brand that could give a unique and exclusive touch to each car designed. To add the taste and ideas of each owner who wanted to take a step further in the personalization of their car. Making it possible to provide it presence with exclusive colors and designs in conjunction with high quality pieces and unparalleled configurations was something a lot of people wanted.

Air Design Original is just that, an expression of freedom and personification. A service that makes your car unique with unlimited possibilities along with deep projection in the world of automotive design. 

POLO EUROPE 2013- 2014

To speak of a Californian style we find a great exponent, the Polo TSI of Cesar developed by Air Design. The combination of the polar white color on the body with the optical and smoked skulls, 30% inked glass, WCI MT wheels -10, Body Kit and pneumatic suspension give it a beautiful exterior.

POLO EUROPE / POLO EUROPA

With the interiors covered in bone-colored leather and computer reprogrammed by API in Stange2, it ties together perfectly with a Borla exhaust system and Brembo ceramic brakes. It's truly an ecstatic vehicle.

When getting this car, Roy knew that he wasn't always into buying top of the line. However, with money that he saved when buying the base version of the TSI Polo, it gave him the ability to focus on personalizing his car as he always dreamed of. By looking for the help from Air Design Originals to fulfill his dream, they were able to replaced the original

suspension with AG Vastago shocks, with Performance Blue springs. They also installed 19" WCI wheels with thin profile tires and a very wide body kit that perfectly combines the orange-copper tones of the car with matt blacks, and leather Sparco seats.

Roy's car reminds us that the real value of an enthusiast's car does not come from the dealership, it comes from how happy it makes you. From the photos of it that you fill your

phone with, to the trips you make with it, show that your car is more than just metal on wheels. There is real value of a car like this. 🚗

The VW Gol is a practical, fun, reliable and simple car. It has a simple mechanic with 1.6 of 8 valves generating a little more than 100 HP to the front wheels, with ideal space to travel comfortably on roads and no struggle when parking in the city. It is not a car full of electronic sensors or loaded with technology, nor does it aspire to be a race car, but it does have one of the best power-to-weight ratios that makes it very fun to drive. It is stable and agile, all

while looking good! 16 "BBS wheels were also incorporated, along with Dunlop Sport SP 5000M wheels, Brembo perforated ceramic brakes, a suspension with H&R coilovers, stability bars signed by Ponce. They suited it up with a Magnaflow exhaust system, LEDs DRL Bezels, the complete Air Design Body Kit, and the whole set of modifications that provide you with greater grip, aerodynamics, lightness, and stability with a lot of style.

Front Spoiler With Splitter

There are few cars that reach this level of epicness. This VW Vento takes reference to its predecessor, the VW Sedan of the 60's' to show a retro Stance style. The paint job done by The Paint Shop in turquoise looks sublime to the color of the original model. The chromes that the car incorporates as standard were respected. This car was build with an Air Design Body Kit, 18" WCI wheels in bright brushed aluminum finish with low rim profile and an Airlift suspension, which formed a perfect set that balanced the retro image with the new age technology making the car a reference of the Stance. 🇩🇪

When talking about the Beetle, originality is definitely included in the conversation. With a style of its own, it's an icon that set a trend and it was just what Pepe was looking for in his car. His work has him traveling all over the country, so being passionate about cars is a must. When looking for a vehicle with a great performance, agility, and of course, a lot of style, you can find it here. Aesthetics were increased when Pepe started with the modifications.

EVERYBODY WANTS IT

DRIFT

STREET RACERS, KNOWN NATIVELY AS HASHIRIYA

Although street races are not legal in practically any country, there are runners with impressive cars outside the circuits in every country. Even if they are usually improvised events, they are very well organized, with the intention of reducing the dangers to the minimum. Some use the main avenues of their cities while other use stretches of roads, mountain passes and there are even places where narrow streets become tracks at nightfall.

This practice was born from the 40's, and was popularized with the birth of the Muscle Car in the 60's. Despite the fact there are different variants in each country, they will always share the excitement and passion for modified cars. With that inspiration in mind this Abarth was born.

CATEGORY **ABARTH500**

It is the first category in the country of Abarth 500 cars, coming from Italy, these cars are assembled in Mexico and with a Kit of competition developed by Italian engineers. It is a highly competitive category and at the same time fun for all public thanks to the qualities of these compact and modern Abarth cars.

A category supported by the best automotive technology in Mexico such as Fiat and Abarth and the not less important aerodynamics contribution by Air Design.

There are companies that become legendary overtime. Without a doubt, Abarth is one of them. Starting as a body shop for some Ferrari cars and then specialized in racing pieces, they were able to revolutionize the engine world with a super lightweight and powerful version for the Fiat 500 from 1957 called Abarth 695. This engine has the ability to compete in GT races with Porsches and Ferraris. It was acquired by Fiat in 1971 to be a fundamental part in its high performance cars and in 2007 Abarth resurfaced with a new

line of vitaminized Fiat products, being the most iconic the relaunch of the Abarth 500.

As the origins of Abarth, the wide Body Kit developed for the 500 and 500c in Air Design exponentially increases the dynamic characteristics of the car, give it a wider, much lower, and very aerodynamic look that is ready to see the checkered flag once again. 🏁

THE ADVENTURE OF A LIFETIME

RENAULT DUSTER 2012-2018

 GET THIS KIT FROM YOUR RENAULT LOCAL DEALERSHIP

The new limited edition of one of the subcompact SUV's of the brand in our country tried to include that fighting spirit that characterizes the cars that run in that Rally. This special edition is based on the Intens versions, but adds interesting aesthetic details, for example, the 16-inch wheels are a specific design and also incorporates exterior decals with the legend 'Dakar', rear wing, unique moldings for this model, two-tone board, steering wheel and vestments with inserts and front bumper with LED lighting.

Front Bumper Protector with DRL LED's

GET THIS KIT FROM YOUR RENAULT LOCAL DEALERSHIP

“ If you ask me, what is the most logical format for a Duster platform? I would say that Pick-Up without thinking twice. It was no accident that their initial concept was like an SUV.

Doing it from a low-cost approach has been very convenient for the brand, but why not take advantage of its mechanical simplicity and general robustness to turn it

into a Pick-Up?

With this idea in mind, the Latin American subsidiary of Renault created the Oroch. It is, in essence, a Duster, but better. The brand did not just moisten the lid of the trunk and put a bed; but they incorporated a series of improvements that let the users to adapt their style to any situation ”

URBAN POWER

KIA STINGER 2017 - 2019

“During my stay in Tokyo, I was eager to know the lifestyle and nightlife of this technological city. In that beautiful environment I met Hiroshi, a big fan of modified cars. He devoted much of his life to find the best accessories for his cars. He showed me his Kia Stinger, a car that stole his heart from day one, because of its impressive appearance and performance. The electric blue color he chose fit the car perfectly with a set of other Brembo calipers that reminded me a lot of the Nissan GTR. This combination made his car fit in immediately with the culture of Street Racing.

Every feature I noticed from Hiroshi's Stinger and his parts very exclusive custom aerodynamic kit finished in beautiful Piano Black paint made me realize that a car with such technology. Like the rear spoiler with an integrated diffuser that provides a real downforce, has enormous potential. Everything was perfectly balanced with its Borla Carbon Fiber exhaust system and with the stunning Sky Blue Body Paint Shop, creating a perfect contrast and an explosion of color along with incredible Rotiform rims 22" inch metallic light charcoal wheels. One of the most visible aerodynamic features on this very impressive Stinger are the front and side functional winglets also printed in Piano Black finishes ending up in a very unique, clean and complete super car.”

KI05D05 Rear Spoiler with Diffuser without Cutout for Exhaust Tip

The 2019 Forte GT Federation official release at the SEMA Show 2018 was a complete success, and for this debut, Air Design decided to start the project with an entry model Forte 2019 and transform it into a real street machine! We started by lowering it approximately one and a half inches with Eibach progressive springs; we changed the tires for 19" TSW sports wheels and Azkenis FK 510 high performance Falken summer tires. We also installed a K&N cold air intake and a Borla exhaust system. But the star of this showcar was undoubtedly the Body Kit, proudly developed by

Air Design, which was inspired by the Stinger GT Federation presented at SEMA 2017, also at Kia's booth. All the parts of this Body Kit were molded by reaction injection in elastomeric polyurethane and painted in two tones. We managed to give a complex effect to the design of the front spoiler with integrated splitter, side skirts and rear deck spoiler, thanks to the dual tone painting. On the other hand, the Front Air Curtains, do function and direct the air as it passes through the front wheels; and finally, one of our favorites, the rear diffuser that gives this sedan a super aggressive style.

Life is constantly changing, your family grows and so do you, you have a better quality of life and you want your car to show that as well. For a car to have quality and class while still showing enthusiasm, the Kia Forte appeared as a great option. There is a lot of quality in a vehicle like this, for example; its good handling, top of the line equipment/ technology and excellent price for its value. However you were looking to show some more spirit so you decided to make a couple of improvements by including a 19" rims set with low profile wheels, adjustable suspension, and of course the Air Design Body Kit painted in dual tone and incorporating aluminum finish in its diffuser which highlights splendidly the large exhaust tip that this car carries from factory.

A very tough competitor arose into the medium Hatchback segment: the Kia Forte. This is an agile car, with a good weight-power ratio, wide, a very stylized aesthetics and, a sporty spirit. Dany sought to accentuate his vehicle's spirit inspired by the JDM and, just after two weeks of buying it, he installed a

RAYS wheels set in bright red, then reupholstered the entire interior to have everything in black leather and red details in Alcantara®. After that he asked Air Design to match his Body Kit to his car's body color but painting the inserts in red, giving his Forte the desired aesthetic worthy of any other JDM.

The Rio is that car that everyone recommends, either HB or Sedan. Rick was convinced once he took the car on a test drive and bought a white HB, a car with a lot of sports spirit but that did not end to reflect it in its aesthetics, so our protagonist decided to do something about it. He kept the neat white of the car and

look for Enkey wheels of 17" of the same target, modified the suspension with Coilovers to lower the height of the car, installed a Borla exhaust system and gave it a unique image with an Air Design Full Body Kit; he also added some decals in red vinyl, having an even greater result than he thought, achieving a car ready to run or for an exhibition.

“I am a person of balance, I always try to look for the best qualities, and i bought the Rio Sedan just for that, an excellent quality-price ratio made me want it, and its lines had potential, a great starting point, but the car needed a touch of improved identity.

Fortunately there are already pieces designed specifically for this car as is the spectacular Body Kit Air Design that was integrated perfectly to the car and enhanced its aesthetics. the AG KIT suspension kit to lower the car it was already on sale too, maybe the hardest thing to find were the right wheels, which are in white. They gave my Rio the perfect identity. ”

This Sedan equipped with Air Design Cross Style Body Kit is definitely an eye-catching. It is distinguished by its more robust aesthetics, where the plastic protections on the fenders and lower parts of the body stand out, as well as the incorporation of the same wheels and tires of its simile Hatchback.

The final result is extremely interesting, since, in addition to having a generous trunk capacity, it has the strength and agility, ideal to get ahead of the most difficult roads with the dreadful potholes, bumps and other imperfections are constants. Is this car perfect for the city and the countryfield? That is just what we want to show.

Jose Antonio has a true passion for JDM, he found this crashed Sentra and decided to not only restore it, but to transform it into a prideful work of art. He repaired the damages it had with extreme dedication

and caution. After the damages were gone he swapped the engine for an SR20T and put 17" RAYS wheels with Toyo Proxes tires. The final step was to take it to the Paint Shop by Air Design to paint the car in Gray

Platinum, the wheels in gold and both, the grille and the Air Design Body Kit, in a graphite color giving a new life to his Sentra, a life worthy of a legend. 🏆

NISSAN KICKS 2017 - 2019
HERE IS
THE REAL
KICKER

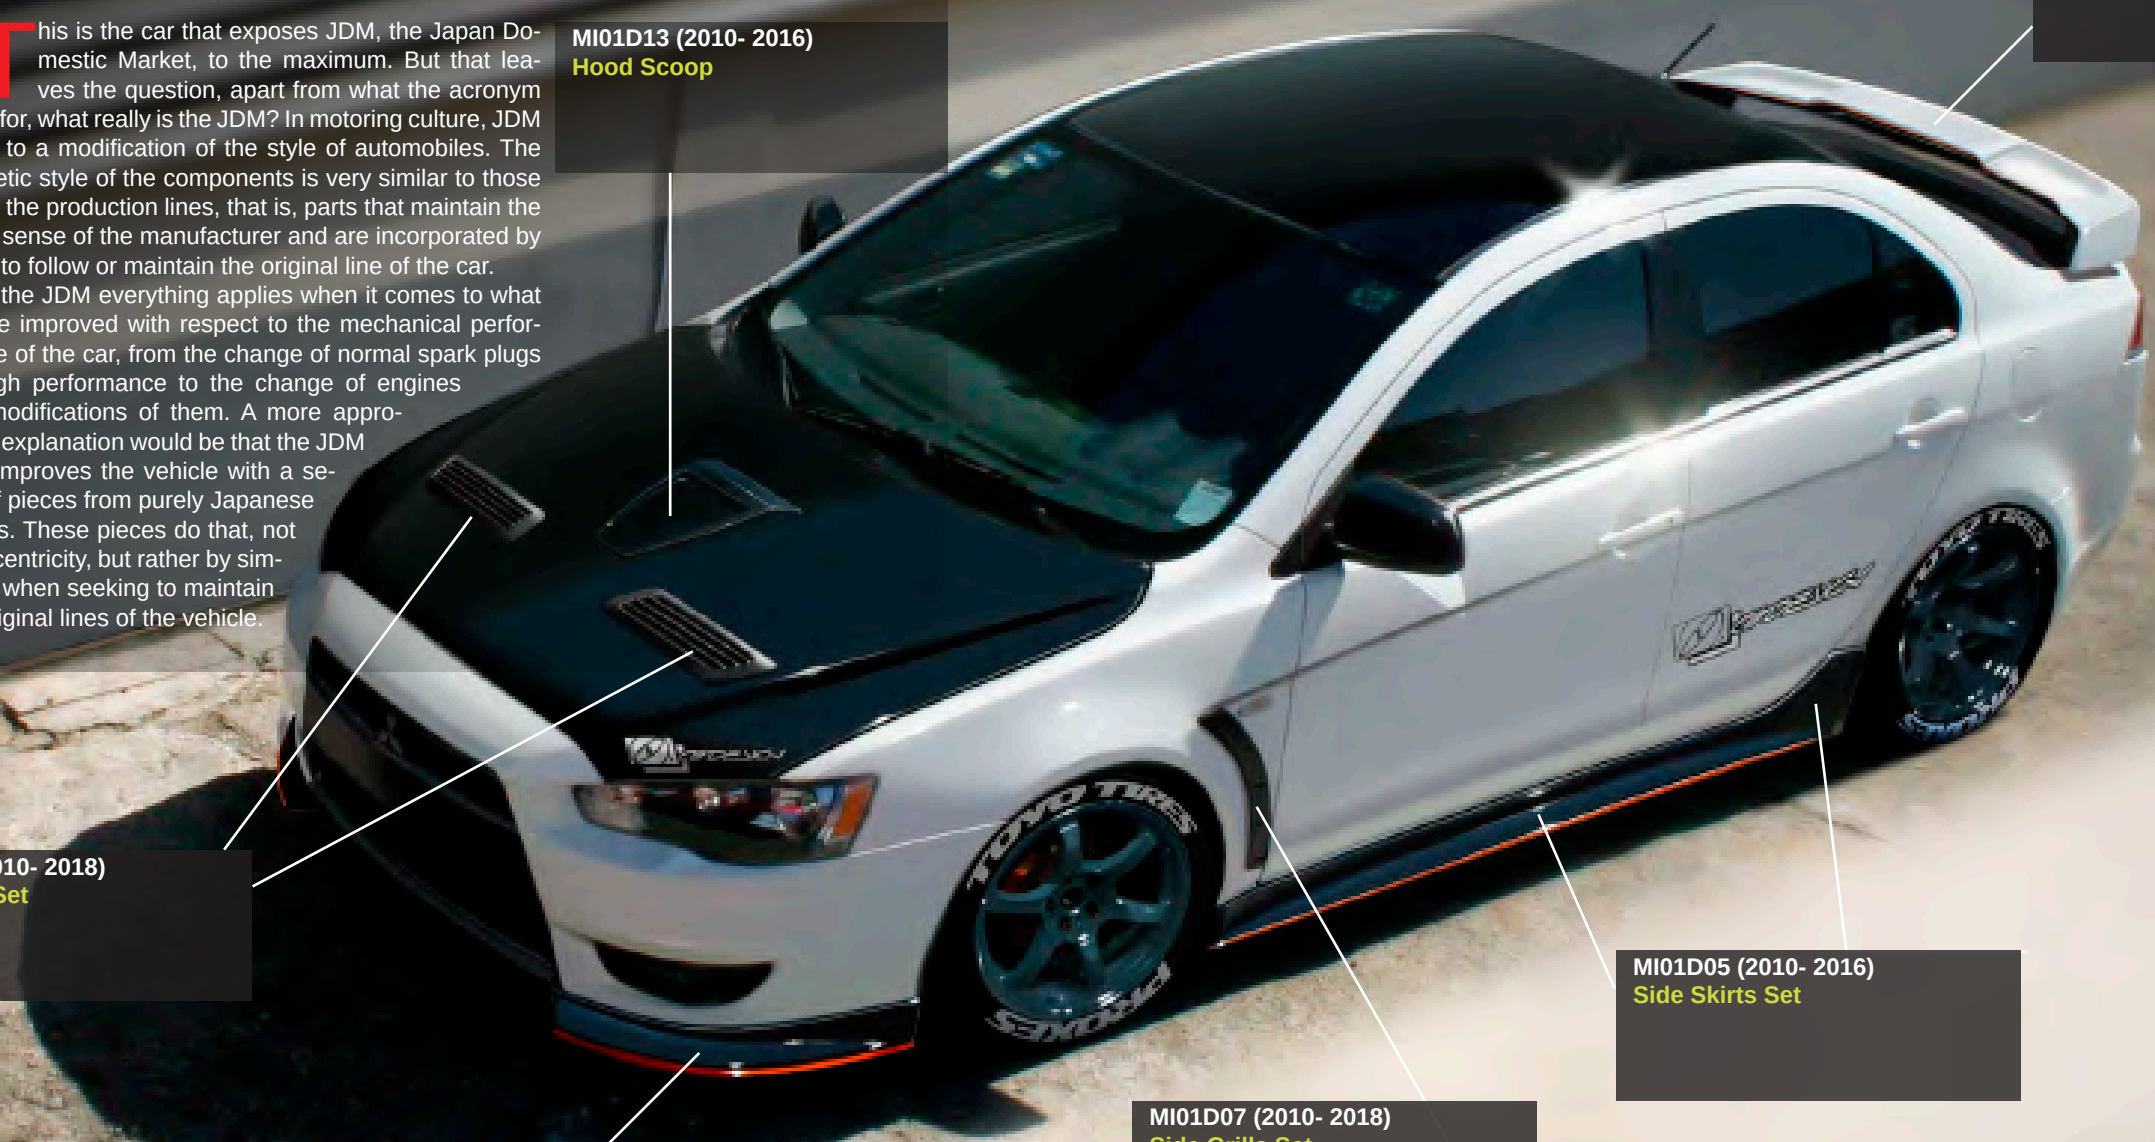

This SUV has almost everything! it has a very urban origin but lacks that feeling of roughness and strength. Just for that reason, at Air Design, we decided to give it a better image with a suitable Body Kit. The kit includes Front, Rear and Side Skid Plates and a Roof Spoiler that combine Satin Black with aluminum finish to protect your Kicks' sheet metal while making it look adventurous and ready for action. 🚗

GENKAKU

THE MOST POPULAR CARS LANCER 2010-2014

This is the car that exposes JDM, the Japan Domestic Market, to the maximum. But that leaves the question, apart from what the acronym stand for, what really is the JDM? In motoring culture, JDM refers to a modification of the style of automobiles. The aesthetic style of the components is very similar to those left by the production lines, that is, parts that maintain the sober sense of the manufacturer and are incorporated by trying to follow or maintain the original line of the car.

In the JDM everything applies when it comes to what can be improved with respect to the mechanical performance of the car, from the change of normal spark plugs for high performance to the change of engines and modifications of them. A more appropriate explanation would be that the JDM style improves the vehicle with a series of pieces from purely Japanese brands. These pieces do that, not by eccentricity, but rather by simplicity when seeking to maintain the original lines of the vehicle.

That's why Tony's Lancer is so special, all his aesthetics do not do more than magnify the original lines of the car and improve the performance. Since all the pieces that he installed were specifically designed for his car, both the trunk and the hood were replaced with carbon fiber parts lightening the whole weight of the vehicle. He installed 17" RAYS rims with Toyo Proxes tires, a Garret turbo of variable geometry, and forged the piston rods. He also changed the factory seats for Sparco's with 4-point belts and a steering wheel of the same brand. Adjustable R&R Coilovers suspensions and Brembo ceramic brakes were added, and the car was completed with the Full Body Kit from Air Design, created specifically for this model, making sure it holds the Japanese spirit of the king of Rallies. 🏆

BRING ON THE Classic Style

2018-2019 Ford Mustang Convertible

At the beginning of the 1960s, Lee Lacocca commissioned Gene Bordinat to design a new concept of a 'compact' and sporty vehicle. The reason? The success of European cars and the fall of Ford Thunderbird sales. The designer and his team got down to work and in 1962 they had prepared the first concept car. A year later, Joe Oros would be in charge of the second prototype. It was 'small' and lightweight, had four independent stools and the gear lever was born from the ground. His image transmitted strength and sportsmanship. In April 1964, Ford presented the version that was going to be commercialized at the New York Auto Show and, to the amazement of the whole team, the first day on the market twenty thousand units were sold. 🚗

When I started to modify my new Mustang, I bought parts that would improve its performance, but back then I had not found any accessory that were able to express the same strength on its outside without losing functionality. I wanted a car that could do amaze more than one and, with that in mind, I started searching the web and found on the Air Design website something that combined all the essence and perfect aerod-

ynamics I was looking for. From the two versions that Air Design had available for the latest generation of the Mustang, I bought the Boy Racer Body Kit which fit perfectly to my car and also provided the good aerodynamic and the exceptional style I was expecting for. 🏆

At Air Design we value aesthetics a lot, but we know that it's not everything. A Master Piece is only achieved by using the appropriate elements without giving too little or too much. When we were summoned to present a car at the 2017 SEMA Show Ford's booth

we knew we needed to equip our stock Mustang GT with the best components worthy of an exhibition car. With a powerful Coyote V8 engine we increased the car's performance, we exchanged the stock wheels for Rotiform 19" rims and Falken improved performance tires.

The next step was to lower its suspension and, of course, to add the Light Body Kit for Mustang we developed, which gave better aerodynamics and a much more elegant and sporty look. At The Paint Shop we gave the Mustang a Silver Metallic color paint job with Glossy

Black stripes going down the middle. It goes without saying that the car was a success and was worthy of Ford's Special Recognition for Outstanding Achievement in Design Award that year. 🏆

THE LEGEND

2015-2017 MUSTANG

This is one of those cars that needs no introduction, the Ford Mustang was born with the aim of conquering the North American market back in the 60's thanks to its design, power and size. It was able to achieve much more than just a good looking car, it became a cultural and aspirational reference that, generation after generation has accentuated and reinvented its sportsmanship. However, for Jim his stock 2015 car had much more potential. He changed the tires to Goodyear Eagle GT2,

installed bigger Brembo ceramic brakes with hyperventilated perforated discs, an adjustable Eibach Performance suspension, roll bars, K&N filter; it was also given an Akrapovič exhaust system and had the computer reprogrammed. By last, he installed Air Design Body Kit that combined perfectly its Satin Black finish with the blue colors of the car's body. Jim's car became one of the most amazing racing Mustangs in the whole country.

FOCUS

HATCHBACK 2011-14

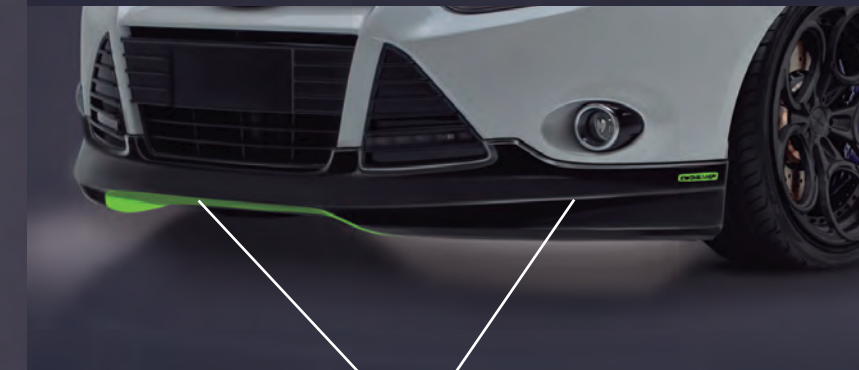

The Focus is usually classified as a more serious car, a car that does everything right but doesn't necessarily stand out. Vic didn't think the same, knowing that it was a very underestimated car and decided to get a Focus and make it the most amazing car in the neighborhood. Starting with a completely stock 2012 Focus SE and got right to work. The first step was changing the stock filters for high performance conical with a complete pipe specially prepared for it. It got some new superlight rims with high performance wheels and grooved brakes, he also installed a new audio system. As for painting, he decided to keep the original color but went to The Paint Shop to paint the Body Kit in a very genuine way, leaving the upper part black and the other half phosphorescent green creating a unique combination. Vic's car now have the style that always deserved.

The Ford Fiesta is a very expressive and dynamic car, original, adventurous, and a youthful spirit. That's why to celebrate the anniversary of The Paint Shop we decided that the Fiesta would be the ideal build for our celebration. Just like its personality, we gave it a chameleon paint job that gives an incredible Under-

ground style to the car. The Air Design Body Kit with a great combination of 17" wheels with the same chameleon color and low profile tires that complement the car with a low suspension, giving us a true trophy car that grabs the attention on the streets. 🏆

THE KING OF ALLEY

SEAT LEON 2015-2017

Chris has a really special Leon FR, although there are many modified FR, his is careful to show his style Stance while at the same time providing maximum performance. He reprogrammed the computer, modified the turbo, put some lighter wheels with high-performance Falken wheels, Magnaflow pipe and an H&R adjustable suspension system. To top it off and give it its finishing touches Chris ordered an Air Design Body Kit performance in a matte color with bright purple paint brushed gold wheels, giving a completely unique look and unstoppable strength.

When someone looks for a good compact car, one of the best options is an Ibiza. This generation is no different. The 2018 Ibiza became a more advanced, refined, agile, and fun car. It was still able to maintain a moderate size with great optimized space. On the outside, its more radical and sporty look

integrates the design lines of its elder brother the Leon, which will stand out beautifully with the Body Kit that Air Design is preparing. Estimated release month is March 2019.

How is a classic born? Many of the great achievements of brands were not planned, as the birth of the Golf GTI whose creators did it behind VW's back. Convinced that they could improve their car, Michelle knew that with that same philosophy he could dignify the new compact sedan Chevrolet, the Cavalier. She started by changing the wheels for a Rotiform with an angled star design that emulates the 80 'Cavalier. A new firmer suspension, exhaust system, headers, and intake were installed to improve the power of the engine. All these modifications were extremely complemented by a full body kit from Air Design in same Satin Black color which highlighted its modern shapes and aggressive lines. Now Michaelle enjoys going in her classic yet modern car to roads surrounded by beautiful scenery. She travels far and near, from the city to the countryside, and also to perfect places for a good photo shoot. 📸

“Not everyone can be a racer, but a racer can come from anywhere. I met Jesús at a car show and we became good friends. He told me that he was putting together a race car and he agreed to show it to me. While we were on the way to getting to know the car he told me about all the modifications he made: Air Design Body Kit, competition tires, superlight wheels, a direct exhaust system, forged rods and pistons, modified transmission, low performance suspension, and racing seats. He never mentioned which car he owned, until we get to his garage and I saw his 2013 Cruze I realized that any car could become a great race car.”

“I am very precise, and I also like the striking, that’s why I decided to buy the new Sonic in orange, it has a modern design, a beautiful color, and I could make it look even better, so I put my hands to work and looked for pieces that not only look good, but also add value to the car. I hit the nail with these 17” Vossen wheels with very thin and very wide profile rims, that made a perfect match with the Air Design Body Kit, which by the way is perfect for the car with the same color. I also changed the shock absorbers for the short stem with new springs to lower the height and go, a real bright car.”

"From the moment that Chevrolet launched its design for the Sonic I loved it, the front was unique, the design of the headlights with separate sections for each light on a black background had a spectacular effect. I liked it so much that I decided to buy it and play with its lines to create a special car, based entirely on black so that its lines

were what stood out and not the color. I installed the Air Design Body Kit with Wing which added a very few aesthetic detail. I also installed low suspension and Vossen wheels that combine lines in aluminum with black background, I managed to have a very precise combination".

Andy waited a long time for the Chevy Sonic, he loved the frontal appearance of it but he needed an HB for space. Even before getting his car from the dealership he started buying parts for it, and by the time he finally bought it, he already had, in his possession, some Sparco seats with 4-point belts, 17" Progressive wheels with low profile rims, coilovers and a Body Kit from Air Design. The next step was to assemble and install all the pieces onto his new car. Andy didn't travel 20 miles with his original parts! He was commissioned to assemble each piece the same, which included the seats, wheels, belts, body kit, coilovers and all the other small accessories. Everything fit perfectly, the only adaptation was the seat but the Sparco universal seat bases fitted perfect with his car. 🏆

SUPER LIFE

CHEVROLET SPARK NG 2017-2019

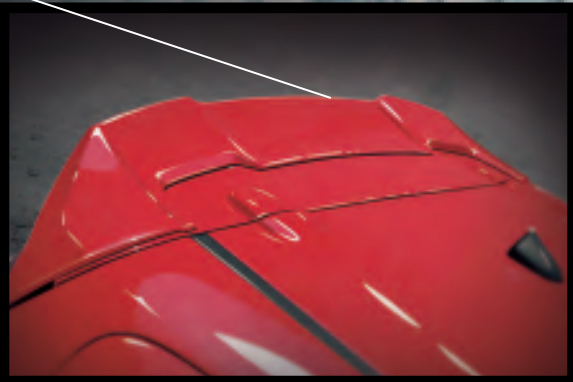

I like to modify cars, I dedicate my life to it. I've worked hard to open up my own workshop and modify as many cars as possible. At the same time I decided to build my own car. I remember the excitement of receiving each piece, the desire to see the finished project. I mounted a set of Vossen wheels, ceramic brakes to match its Airlift and a Body Kit I got from Air Design and that was sent by them matching the exact color of my car. LED lights were also put in. I had to created all the exhaust system and air induction by hand. There's no better feeling than knowing that you build your own car! 🏆

Three Body Kit

CHEVROLET SPARK 2013-2016

Mario is dedicated to personalizing items and cars through vinyl. He decided that his car should reflect his personality that he could provide with his line of work. The first step was to eliminate the rear seats to have cargo space appropriate to their needs and then proceeded to start working on the design. The design was achieved by combining its wrap with black and dark orange matte colors, and its Air Design Body Kit was also customized with glossy black, giving the car a unique personality that reflects the work and soul of Mario.

For a lot of us, when we were younger our passion for cars started with collecting toy cars, they brought us joy and we thought they were so cool. That was a time that required a very worthy tribute, so Max decided to make this Beat that tribute. He acquired some 17" Fifteen52 wheels with a friendly design with very low profile rims. The next step was to add white lights to match the color of the body and the Body Kit made by Air Design in Satin Black finish, making it a car that invites you to play with it. Fun, agile and always ready for the adventure. 🏁

This car was based on the designs of Asia, where its aesthetic relates to the legendary Koi fish. The Koi is a small fish that becomes strong when swimming against the current, famous for its red, orange and white colors and also for resembling its head of the mythological dragon. This car is just like that, small but with enough power to overcome the asphalt jungle. A car that becomes stronger with details like its new wheels, adjustable suspension and an Air Design Body Kit that enhances a strong and aggressive design, that makes the Beat our big fish. 🐉

There are cars that people praise for their versatility, endurance, agility, and space. Beloved cars that people practically demands from the manufacturers. just like the VW Sedan which was produced in Mexico until 2003, the Nissan Sentra B13 until 2017, or the Combi until 2014 in Brazil. The Chevrolet Aveo has joined that list of cars appreciated by the people, lasting 10 years with very few changes. Its latest refreshing features more sports lines which have been retaken by Air Design for the Body Kit shown in this page.

Universal hand brake.

FUEL CAPS

27004CR

27004OA

Developed in a special aluminium alloy through an innovative forging technology, and trimmed with CNC machine computer numerical control to obtain the perfect coplanar surface. They are heat treated to increase the mechanical resistance and then they are anodized to prevent oxidation. Fits on the most popular vehicles, bolts and studs come included.

27009G
