

PROFESSIONAL GRADE SUSPENSION, MADE IN THE USA

THE ALDAN AMERICAN STORY

I grew up obsessed with cars, trucks and motorcycles and always had an interest in manufacturing. For over three decades, The Aldan Shock Co. was U.S. Veteran owned and operated, specializing in high performance shocks and coilovers here in Southern California. While working at Hot Rod Magazine, I made a call that would forever change my life. In 2014, at 27 years old, I quit my job and struck a deal to acquire what's now known as Aldan American.

An iconic American brand, Aldan was one of the first companies to manufacture adjustable coilovers for street rods in the early 80's. Aldan later developed one of the first, billet aluminum coilovers designed for street performance and drag racing. Over the years Aldan supplied some of the world's top builders and racers with high performance coilovers and shocks.

When I first met the former owner in late 2013, I was amazed to learn every component that went into an Aldan shock was made in the USA. In addition to select Aldan components, several of Aldan's longtime vendors and suppliers were manufactures for aerospace and military applications, held to the highest standards. Aldan had the product, now it needed some energy and life brought back into the brand.

As we begin our fourth year in our 37 years of business, making Aldan American products more available and accessible than ever is our mission. Staying true to our legacy of designing, building and standing behind the highest-quality, American made suspension products is what keeps my team and I driving forward each day.

Welcome to Aldan American. Professional Grade Suspension.

Garrett Harmola
President, Owner

COMPLETE COILOVER KITS

Complete Universal Coilover Kits from Aldan American ship fully assembled, complete with springs compressed, anti-seize applied and ready to bolt-in with no final spring assembly required. Bolt on and go!

All Coilover Complete Kits include one ALD-1 Adjustable Spanner Wrench.

- Phantom Series - Rebound Adjustable
- Striker Series - Double Adjustable
- Ships Fully Assembled
- Includes 5/8" & 1/2" Sleeves with Polyurethane Bushings or 1/2" Bearings
- 2.5" Black Powder Coat Coil Springs Installed
- Made in U.S.A.

Spanner Wrench Included with All Universal Coilover Kits!

Custom Shock Selector: Which Coilovers Are Right For Me?

Use these three factors to determine which shock absorber is right for your vehicle:

1) Desired Ride Height, 2) Vehicle Usage and 3) Mount Type and Size.

1) Desired Ride-Height

First determine your vehicles stance front and rear. Once you have your vehicles stance, your ride height will be the measurement from mounting bolt to mounting bolt of where your coil-overs will bolt onto your chassis, when the vehicle is sitting on level ground.

2) Vehicle Usage

Is your car built for the Street? Track? Road-Course? Drag Racing? - Each type of use works best with a set shock

- Street - Single Adjustable or Non-Adjustable
- Track - Single Adjustable or Double Adjustable
- Road-Course - Single Adjustable or Double Adjustable
- Drag-Racing - Single or Double Adjustable

3) Mount Type and Size

What is the diameter of the mount your shocks will be bolting to? What size and style of mounts will you need?

- Bushing - 5/8", 1/2" | Best Ride for Street Use
- Bearing - 1/2" x 1/2" Wide, 1/2" x 1" Wide, 1/2" x 1 1/2" Wide | Best for Racing use and tight clearances.

Ordering Aldan American Coilovers & Shocks: Here's How To Find The Part Number That's Right For You

Selecting Coilovers & Shock Absorbers

Select product on pages 4-7

Example Part Number:

AS-654

- 1 Mount Type: **AS** = Bushings
PAS = Bearings
- 2 Shock Model

Selecting Coil Springs

Select product on pages 11-12

Example Part Number:

10-250BK 2

- 1 Coil Spring Length in Inches
- 2 Spring Rate (lbs./in)
- 3 Finish: **BK** = Black Powder Coat
CH = Polished Chrome Plated
- 4 Optional: Add the number "2" after each coil-spring part number to order a PAIR of coil springs

Selecting A Coilover Complete Kit

Select product on page 9

Example Part Number:

A654250B

*Coilover Complete Kits include one ALD-1 Adjustable Spanner Wrench

- 1 Mount Type: **A** = Bushings (includes 5/8" & 1/2" sleeves) **P** = Bearings (includes 1/2" I.D. x 1" wide PTFE Kevlar bearings)
- 2 Shock Model: (See model specs on pages 4-7.) Please note that coilover selected will determine spring length. For example, coilover AS-654 uses a 10" long coil-spring.
- 3 Spring Rate: Select from Pages 11-12
- 4 Spring Color: **B** = Black Powdercoat

SHOCK ABSORBER LINE-UP

STRIKER SERIES Double Adjustable - Rebound + Compression

- Double Adjustable (Rebound + Compression) - Greatest Adjustability
- 66 Points of Adjustment - Keep tires planted longer, leave the line faster
- Nitrogen Charged - Provides a smoother, more consistent ride
- Made in U.S.A. - Designed with lighter weight, higher strength billet mounts, bodies & hardware
- Serviceable & Rebuildable - Never buy new shocks again
- Use with 2.5" I.D. Coilsprings
- PAS models include 1" x 1/2" I.D. Bearings (Additional Bearing Options and Sizes available)

SHOCK ABSORBER LINE-UP

MII SERIES Single Adjustable - Rebound (Mustang II)

- Single Adjustable (Rebound) - Stud Upper Mount, Eyelet Lower Mounts
- 20 Points of Adjustment - Knobs locate under the hood for simple tuning
- Nitrogen Charged - Provides a smoother, more consistent ride
- Made in U.S.A. - Designed with lighter weight, higher strength billet mounts, bodies & hardware

- Serviceable & Rebuildable - Never buy new shocks again
- Use with 2.5" I.D. Coilsprings
- PAS models include 1" x 1/2" I.D. Bearings (Additional Bearing Options and Sizes available)
- AS Models Include 5/8" and 1/2" bushings with Sleeves (7/16" and select metric sizes available)

(* Shown above with chrome coil-spring - Sold Separately.)

COIL SPRING LINE-UP

Aldan American offers a wide variety of coil spring lengths and rates to fit your ride. We use only the finest, Cold-Wound High-Tensile Chrome Silicon Steel on our 2.5-inch I.D. (Inside Diameter) Coil Springs. All of our steel is sourced and manufactured here in the U.S.A. We offer black powder coat or a hard polish-chrome finish on our springs. Aldan Coil-Springs hold a Lifetime Warranty. With normal use and proper maintenance, all Aldan Coil-Springs will hold 2% of their original rate and length over time.

- Made In the U.S.A
- Each Spring is Tested and Rated
- Lifetime Warranty on all Aldan Coil Springs
- Lightweight
- Greater Travel
- Precise Rates and Linearity
- High Durability Finish
- Available in 6", 8", 9", 10", 12" Lengths
- Coil Rates Available from 100-800 lbs/inch

- Powder Coated Black (Smooth Finish) or Show Quality Chrome Finish (Smooth Finish)
- Cold-Wound High-Tensile Chrome Silicon Steel
- Flat-Ground Ends with Tolerances to +/- 1 Degree

*** Note When Ordering a PAIR of Coil-Springs:**
Optional: Add a "2" after each coil-spring part number to order a PAIR of coil-springs.
Example Part Number For a Pair of Coil-Springs: 10-250BK2

Aldan American Coil Springs

Our coil springs are cold wound, chrome silicon wire then powder coated gloss black. Chrome springs are available as an option. All springs are color coded reflecting the amount of weight necessary to compress the spring one inch.

WEIGHT CODE CHART

Color Code: W/White, R/Red, B/Blue, Y/Yellow, G/Green
 [Color codes are located at the top or bottom of each coil spring.]

6" SPRING	180 = G 200 = W 220 = R 250 = B 300 = Y 350 = Y-R 400 = B-R 450 = W-R 500 = RWB 600 = BW 650 = BWY 750 = BWG	350 = Y-R 400 = B-R 450 = W-R 500 = RWB 550 = YB 600 = BW 650 = BWY
8" SPRING	200 = W 250 = B 300 = Y 350 = Y-R 400 = B-R 450 = W-R 500 = RWB 550 = Y-B 600 = B-W 650 = BWY 700 = Y-W 750 = BWG 800 = RBG	12" SPRING 80 = W-G-R 100 = W-G 120 = Y-G 140 = R-G 160 = B-G 180 = G 220 = R 250 = B 300 = Y 350 = Y-R 400 = B-R 450 = WR 475 = RWY 500 = RWB 550 = YB
9" SPRING	100 = W-G 120 = Y-G 140 = R-G 160 = B-G 180 = G 220 = R 250 = B 275 = RBY 300 = Y	

Drag Racing Coil Rate Charts

(For Drag Racing use only.)

Recommended Front Spring Rates - Drag Racing	
Spring Rate:	Total Weight on Front Wheels:
200	under 800 lbs.
250	800-1000 lbs.
275	1000-1100 lbs.
300	1100-1200 lbs.
350	1200-1500 lbs.
400	1500-1800 lbs.
450	1800-2000 lbs.
500	2000-2300 lbs.
550	2300-2500 lbs.
650	2600 and up

Recommended Rear Spring Rates - Drag Racing	
Spring Rate:	Total Weight on Rear Wheels:
70	under 800 lbs.
80	800-1000 lbs.
100	1000-1100 lbs.
120	1100-1200 lbs.
140	1200-1300 lbs.
160	1300-1400 lbs.
180	1400-1500 lbs.
200	1600-1800 lbs.
250	1800-2400 lbs.
300	2400 and up

Quick Select Street Rod Spring Rate Guide

Use the chart below as a baseline for selecting Street Rod Coil Spring Rates. It will get you into the ballpark, but feel free to call us for more specific applications.

*Note - Spring rates below are a starting point, please call before ordering to confirm the correct spring rate for your car

General Description	Front/Rear (Rate/Inch in lbs.)
4-cylinder, V-6 T-bucket, Track T	300/160
V-8 T-bucket, V-6 Hiboy Roadster	350/180
'29-'32 full-fendered coupes, "A" sedans w/Sm. Block	400/200
'32-'34 sedans, '35-'36 coupes w/Sm. Block	400/250
'35 and up sedans, '37-'40 coupes w/Sm. Block	400/300
Above cars w/Big Block	450-550/(See "Rear" rates above)
Jag Rear Ends	N/A/180-250

Spring Rate Selector: Which Springs Are Right For Me?

Four factors help you determine which spring and spring rate are right for your vehicle. The factors are: 1) Base Vehicle Weight, 2) Vehicle Features Weights, 3) Coil Rate Calculation, 4) Mounting Angle.

1) Base Vehicle Weight

Street Rod - Average Vehicle Weight Chart

YEAR	MAKE	MODEL	FRONT	REAR
1927	Ford	Coupe	1200	1300
1928-31	Ford	Coupe	1300	1400
1932-34	Ford	Coupe	1400	1600
1935-38	Ford	Coupe	1600	1700
1939-40	Ford	Coupe	1700	1800
1946-48	Ford	Coupe	1750	1700
1932-38	Chevy, Plymouth, Dodge	Coupe	1500	1550
1939-40	Chevy, Plymouth, Dodge	Coupe	1600	1600
1947-1953	Chevrolet	Pickup	1950	1500
1954-1958	Chevrolet	Pickup	2250	1750
1947-1953	Ford	Pickup	2000	1550
1954-1958	Ford	Pickup	2150	1650
1927-1975	Other	Other	Please Call	Please Call

*Two cars that appear to have the same weight can be substantially different in weight mass and distribution front-to-rear.

*Average weights above include: One driver, Small Block Chevy V8, Automatic Trans, Full interior, Fuel & Spare Tire

2) Vehicle Features Weights

Street Rod - Adjust Spring Rate *Add or subtract front and rear weights from above using this chart below (Based on your vehicle features)

FEATURE	FRONT	REAR
Big-Block V8	+ 200 lbs.	+ 50 lbs.
Other Small Block V8	+ 50 lbs.	+ 50 lbs.
V6	+ 50 lbs.	+ 50 lbs.
4-Door	+ 50 lbs.	+ 150 lbs.
Panel or Delivery	+ 100 lbs.	+ 200 lbs.
Full Fendered	+ 100 lbs.	+ 150 lbs.
Fenderless	- 100 lbs.	- 100 lbs.
Supercharger	+ 50 lbs.	+ 50 lbs.
Air Conditioning	+ 50 lbs.	+ 50 lbs.

3) Calculating Your Coilover Coil Rate

Calculating Your Coilover Spring Rate for (REAR) Solid Axle.

*Use your data from Step 1 and Step 2 above.

Street Rods - (REAR) Solid Axle Calculation

Line 1 Rear Weight = (Weight of Vehicle) x (.5)

Line 2 Sprung Weight = (Rear Weight of Vehicle) - (300 lb)

*The number you're subtracting here (300 lb) accounts for the rear end, brakes, etc. - Everything bolted to the rear axle.

Line 3 Weight on each spring = (Sprung Weight)/2

Line 4 Spring Rate = (Weight on each spring)/(Spring compression)

* Spring compression is the amount in inches your coil spring will be compressed. See example below for a theoretical coil rate calculation.

Example of Spring Rate Calculation (Using Above Equation):

Weight of example vehicle: 3400 lb vehicle

Line 1 Rear Weight: (3400 lb) x (.5) = 1700 lb

Line 2 Sprung Weight: (1700 lb) - (300 lb) = 1400 lb

Line 3 Weight on each spring: (1400 lb)/2 = 700 lb

Line 4 Spring Rate: (700 lb)/2.5 = 280 lb

Line 5 We'd recommend using a 300 lb coil spring on each coilover of this vehicle's rear end.

Late Models

*For Late Model vehicles, input the equation below in place of "Rear Weight."

Rear Weight = (Weight of Vehicle) X (.45)

4) Mounting Angle

Using the spring rate determined in Step 3, Line 5 above - Now it's time to account for the mounting angle of your coilover to determine the most optimal, and final spring rate for your vehicle.

Mounted Shock Angle	10°	15°	20°	25°	30°	35° or Greater
Correction Factor	0.98	0.93	0.88	0.82	0.75	Please Call

- Using the 300 lb spring determined in Step 3 on Line 5 above, lets factor in our mounting angle.

*We'll use a mounting angle of 30° for this example.

- Mounting Angle (30°) has a Correction Factor (0.75)

*See Table A. above

Equation:

Spring Weight (From Step 3, Line 5)/Correction Factor = Optimal Spring Rate

Example:

(300)/(0.75) = 400 (We'd recommend running a 400 lb coil spring in this example for optimal handling and ride quality.)
