

Ford F150 2009-2014

Ford F150 LED 3rd Brake Lamp with Cargo Lights (Wiring Instructions)

1. Please reference the table below to determine where the wires coming out of the back of your new LED 3rd Brake Lamp are to be connected on your truck.

Wire #	3 rd Brake Light	Factory Wiring Connection Point
1	Solid Black Wire	Splice to ground for Brake Light & Cargo – This wire is also solid BLACK.
2	Solid Red Wire	Splice to positive 12V for Brake Light – This wire is also solid RED.
3	Solid White Wire	Splice to positive 12V for Cargo Light – This wire is solid LIGHT BLUE.

2. There are two options to properly connect the LED 3rd Brake Lamp to your O.E. Wires:

Option 1: Cut off your three O.E. bulb connectors, and connect the wires of your new LED 3rd Brake Lamp to your O.E. wires as depicted in the wire color cross reference chart shown above.

Option 2: If you want to retain your O.E. connector plug, you must splice the wires a few inches before the O.E. connector plug by peeling back the O.E. wire covering/insulation and connect the wires as depicted in the wire color cross reference chart shown above.

Simply re-use your factory screws when mounting your new LED 3rd Brake Light. **DO NOT OVERTIGHTEN THEM.** Remember you are screwing down into a plastic housing and care is needed to ensure a nice snug fit that isn't so tight you crack the housing. Apply a little RTV silicone in the screw holes and on the gasket before you install to ensure a nice water-tight seal & enjoy your new LED 3rd Brake Light & remember **"DON'T GET LEFT IN THE DARK"**.
