

WHEEL COLLECTION

DEFINED BY DESIGN

FLOW FORM

BENEFITS:

UPTO 30% LIGHTER THAN A CAST WHEEL | UPTO 30% STRONGER THAN A CAST WHEEL | INCREASED ACCELERATION & BETTER MPG

FLOW FORMING ALSO KNOWN AS 'ROTARY FORGED' IS A SPECIALIZED PROCESS THAT BEGINS WITH A LOW PRESSURE CASTING. THIS IS THEN PLACED IN A FORGING MACHINE THAT SPINS AT HIGH VELOCITY. THE OUTER BARREL OF THE WHEEL IS THEN HEATED TO HIGH TEMPERATURE, STEEL ROLLERS PRESSED AGAINST THE RIM THEN FORGE THE BARREL OUT TO THE DESIRED WIDTH. THE COMBINATION OF HEAT,PRESSURE AND SPINNING CREATE A WHEEL WITH STRENGTH SIMILAR TO A FORGED WHEEL WITHOUT THE HIGH COSTS.
