

# SMITHSONIAN BATTLE

## THE CORE

We are committed to doing three things better than any other wheel company in the market: we design wheels with world-class, timeless designs; we market our brand as a true hard-core enthusiast lifestyle; we provide best-in-class customer service. Every day we try to live up to the idea of being the best in those three things. It drives us in every decision we make and in every design we create. It gives our customers the opportunity to express their specific lifestyle.

## DEATH METAL BLACK

Death Metal Black is our signature finish. It comes with a gloss-black finish and FULL CNC milling on the rim lip, face of the wheel and sides of the spokes. On some designs there is a BMF Wheels logo engraved on the rim. After machining, the wheel is clear coated in a high-gloss wheel is clear coated in a high-gloss clear automotive paint to lock in the machining and prevent the aluminum from oxidizing. This is the finish that set BMF Wheels apart from our competition since we founded the company!

# BMF WHEELS

## STATE-OF-THE-ART

Creating a very unique look in the wheel market is much easier said than done. Everyone wants to come out with the "next big thing." At BMF Wheels, we actually did it. We created a look and invented a process that is widely sought after in the market. We understand the difference between imitation and the genuine article. Our process is so unique and advanced that we were awarded a Utility Patent from the US Government. We are proud to continue our growth and expand our product line again to offer our customers the best wheels for the lifted and leveled truck market. First comes the innovator, then come the imitators. BMF Wheels are State-of-the-Art in every way.

## STEALTH

Stealth is a satin black painted wheel with CNC machined accents on the rim lip only. After machining, the wheel is clear coated in a satin clear automotive paint to lock in the machining and prevent the aluminum from oxidizing. There is no machining on the face of the wheel or the sides of the spokes. For those customers that lead a tactical lifestyle, Stealth was made for them.

BMF Wheels has several new products currently in development and looks forward to releasing them soon. For more information, please visit [BMFwheels.com](http://BMFwheels.com).

# BMF WHEELS

## GROUND BREAKING DESIGNS

BMF Wheels is a truly unique and performance-driven line of wheels for the off-road and lifted truck enthusiast. Every BMF Wheel is manufactured using a proprietary multi-axis CNC machining process. This process is protected by utility patent issued by the United States Patent and Trademark Office. These cutting-edge innovations produce a true three-dimensional look that is second to none. All BMF Wheels are engineered to exploit the longest and straightest rim lip possible, and are all TPMS sensor compatible to meet OE specifications.

## FITMENTS

Our fitments are absolutely perfect for an aggressive fit on lifted and leveled trucks using all-terrain and mud-terrain style tires. There are several wheel designs to choose from in 17, 18, 20, 22 and 24 inch diameters. We have two basic programs regarding fitment, EZ-Fit and negative offset. Our EZ-Fit program is designed for an aggressive look on primarily leveled vehicles but can work with a full suspension lift as well. EZ-Fit is available in 17x8.5, 17x9, 18x9, 20x9 and 22x9.5 currently. Our negative offset offering is available in 20x10, 201x12, 22x10.5 and 24x10.5 for full suspension lift packages.

## ADVANCED MACHINING

BMF Wheels is the original innovator of the "Death Metal" Black machining process. We invented it and have a utility patent on the process. The detail and effort that goes into the machining of BMF Wheels far exceeds that of other imitators in the market. Every facet, radius, chamfer and mill-cut is precisely laid out and planned for each design.

We mill every BMF Wheel regardless of finish to ensure a deep, rich design that gives you a unique black & machined look combined with the look and feel of a forged wheel. BMF Wheels are truly a step above in every aspect of machining, design and quality.
