

WEIGHT CARRYING:

YEARS: 2017-PRESENT

11449 INSTALLATION INSTRUCTIONS

Safety glasses should be worn at all times while installing this product.

STYLE: SEDAN

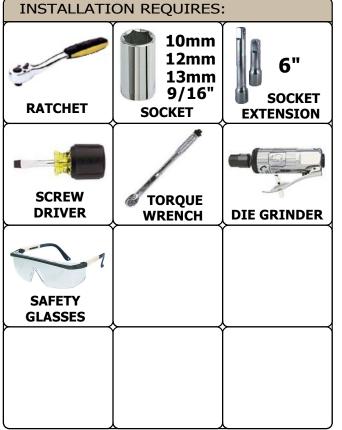

MAKE: MITSUBISHI

TRAILER WEIGHT: 1,500 LBS.

TONGUE WEIGHT: 150 LBS.

PRO INSTALL TIME: **30 MIN. NOVICE INSTALL TIME:** 60 MIN.

IF YOU ARE HESITANT TO UNDERTAKE THIS TASK ON YOUR OWN, CONTACT AN AUTHORIZED CURT INSTALLER FOR ADDITIONAL ASSISTANCE.

INSTALLATION TIPS:

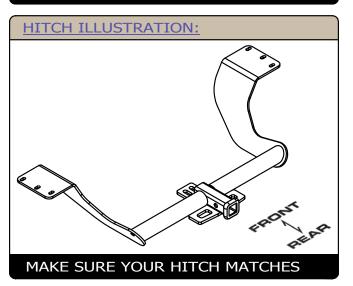

- 1. BEFOREYOU BEGIN INSTALLATION, READALL INSTRUCTIONSTHOROUGHLY.
- 2. TOEASEINSTALLATION,2 PEOPLE MAY BE REQUIRED.
- 3. USINGPROPERTOOLS WILLGREATLY IMPROVE THE QUALITYOFTHEINSTALLANDREDUCETHE TIME REQUIRED.

MODEL: MIRAGE G4

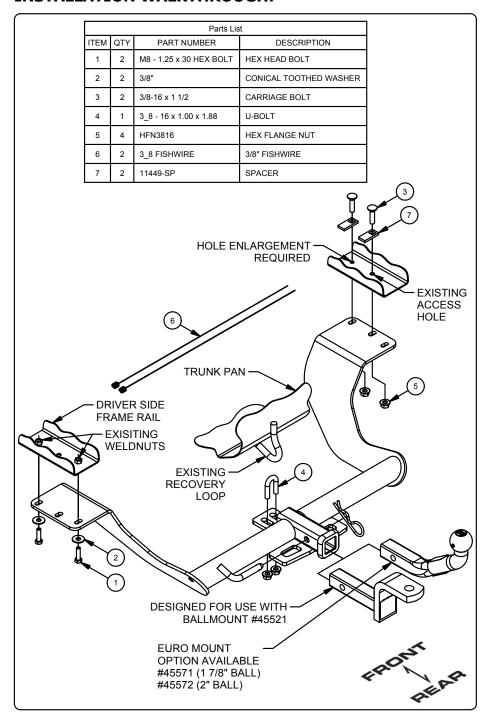

LEVEL OF DIFFICULTY: EASY

LLVLL OF DIFFICULTY. LAST	
EASY	MODERATE CHALLENGING
ACCEPTION NICLE	- FISHWIRE
William &	- REVERSE FISHWIRE
	- HOLE ENLARGEMENT
	- NO DRILLING
TRIM	- UNDERBODY PANEL TRIMMING

INSTALLATION WALKTHROUGH:

1. Remove plastic panel from drivers side of the vehicle by removing (2) M6 screws with a 10mm socket and (2) plastic clips. Lower the now exposed canister by removing (4) M8 screws using a 12mm socket and (1) M6 screw using a 10mm socket. Save for reinstallation in Step 5.

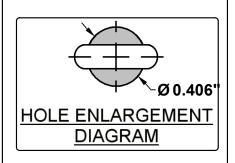

2. Rotate canister downward to provide access to the frame rail. Remove exposed (2) M10 screws using a 12mm socket. Save for reinstallation in Step 3.

INSTALLATION WALKTHROUGH:

3. Enlarge forward most hole passenger side frame rail hole. Fishwire 3/8" carriage bolt and 11449-SP spacer through the large access hole in the passenger side frame rail and out the enlarged hole. Reverse fishwire remaining 3/8" carriage bolt and spacer into the large access hole.

4. Place u-bolt into position in the vehicle recovery loop. Raise the hitch into position in between the last bracket removed in Step 1 and the driver side frame rail. Loosely secure with provided M8 bolts and conical tooth washers on the driver side. Secure remaining fasteners using 3/8" flange nuts.

5. Tighten 3/8" bolts to 37 ft-lbs. Tighten M8 bolts to 23 ft-lbs. Repeat Step 1 in reverse order to reinstall components removed from the vehicle. If desired trim underbody panel as shown below using contours of the part as a guide.

TOWING SAFETY INFORMATION

Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

How Much Can You Safely Tow?

Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

• A: Rise. B: Drop. C: Hole Size. D: Length.

Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weight rating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- · Every time you tow, check the nut and lock washer to make sure they are fastened securely.

 • A: Ball Dia. B: Shank Length. C: Shank Dia. D: Shank Rise.

Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

Class 1: 2,000 lbs. (8.9 kN) Class 2: 3,500 lbs. (15.6 kN) Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.

Wiring identification by color:

CURT DISCLAIMER: WIRING COLOR SHOWN WORK IN CONJUNCTION WITH CURT MANUFACTURING PRODUCTS.

MITSUBISHI MIRAGE G4

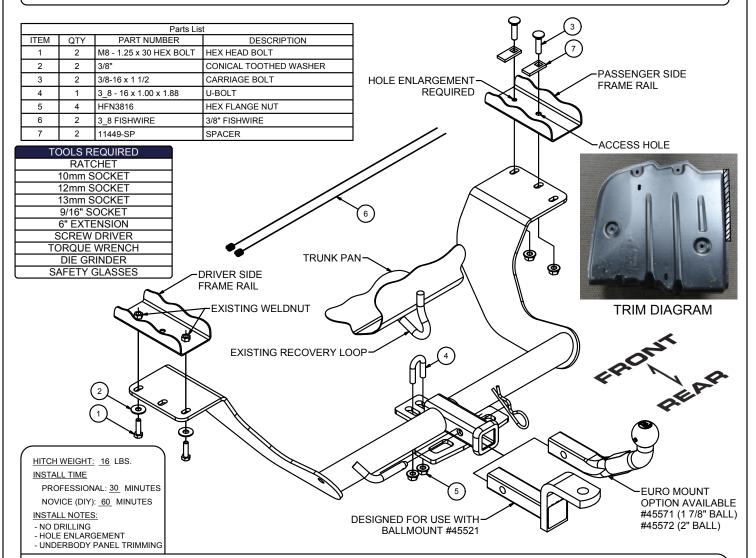

GROSS LOAD CAPACITY WHEN USED AS A WEIGHT CARRYING HITCH: 1,500 LBS. TRAILER WEIGHT & 150 LBS. TONGUE WEIGHT.

WARNING: ALL NON-TRAILER LOADS APPLIED TO THIS PRODUCT MUST BE SUPPORTED BY 18050 STABILIZING STRAPS.

** WARNING: ** FAILURE TO PROPERLY SUPPORT NON-TRAILER LOADS WILL VOID PRODUCT WARRANTY **
WARNING: *** DO NOT EXCEED VEHICLE MANUFACTURER'S RECOMMENDED TOWING CAPACITY

INSTALLATION STEPS

- 1. Remove plastic panel from drivers side of the vehicle by removing (2) M6 screws with a 10mm socket and (2) plastic clips. Lower the now exposed canister by removing (4) M8 screws using a 12mm socket and (1) M6 screw using a 10mm socket. Rotate canister downward to provide access to the frame rail. Remove exposed (2) M10 screws using a 12mm socket. Save for reinstallation in Steps 3 and 4.
- 2. Enlarge forward most passenger side frame rail hole. Fishwire 3/8" carriage bolt and 11449-SP spacer through the large access hole in the passenger side frame rail and out the enlarged hole. Reverse fishwire the remaining 3/8" carriage bolt and spacer into the large access hole.
- 3. Place u-bolt into position in the vehicle recovery loop. Raise the hitch into position in between the last bracket removed in Step 1 and the driver side frame rail. Loosely secure with provided M8 bolts and conical tooth washers on the driver side. Secure remaining fasteners using 3/8" flange nuts.
- 4. Tighten 3/8" bolts to 37 ft-lbs. Tighten M8 bolts to 23 ft-lbs. Repeat Step 1 in reverse order to reinstall components removed from the vehicle. If desired trim underbody panel as shown above in trim diagram using contours of the part as a guide.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
