DONT'T ATTEMPT TO MOUNT YOUR OWN TIRES

Safety tips and much more may be obtained by requesting a copy of our bulletin from your local tire dealer. Also available in multilingual and mobile formats for download.

Mount light truck tires with care. Improper mounting procedures or tools can cause irreparable damage to tires and wheels.

To mount a tire on a wheel, use a tool designed especially for the purpose. Never use a wrench or screwdriver to stretch the tire or to pry the tire onto the wheel.

DON'T MOUNT TIRES ON WHEELS WITH DIFFERENT SIZES AND TYPES ON THE SAME AXLE

For optimum handling and control, Galaxy recommends at least two tires on the same axle with the same size and type unless otherwise specified by the vehicle manufacturer.

FOLLOW THESE ADDITIONAL GUIDELINES

Lack of rotation, worn suspension parts, underinflation/overinflation, improper and unsafe use of this product.

- Review tire identification numbers on your tires. They provide important information about your tire, such as the tire's maximum load rating, speed rating, and tire size.

- Check your vehicle's owner's manual (or your vehicle) to determine if it is equipped with run-flat tires, the following applies:

- When inspecting your tires, look for McGard (or any other run-flat tire service bolts) in the wheels. These bolts are part of the original equipment. They are designed to increase the chance that your tire will be repairable.

- If inflation pressure is below the recommended pressure, take these precautions to prevent a loss of vehicle control that could result in serious injury or death: Avoid potholes and other road hazards. Avoid sudden, sharp turns or aggressive lane changes. Follow the posted speed limit. Avoid jackknifing, loss of control, and losing steering control.

- Whenever speed damage occurs to the wheel rim, this indicates that the tire cushion is not being used properly. This must be corrected before using the tire on any vehicle. Visit a Goodyear Authorized Retreading Center and/or use only the tire products.

- The Goodyear Run-Flat tire is a high-performance tire with a remarkable design, engineered to provide added operational monitoring. The tire must be replaced no later than the end of the 16th rotation at or before reaching the limiting ODOT RMA. If you value your vehicle, you must comply with this requirement.

- TIRE PRESSURE-MONITORING SYSTEM ALERT

- When replacing tires, you must maintain the outside diameter and inflation pressure listed on the sidewall of the tire. Always drive safely and obey all traffic laws. Avoid sudden, sharp turns or aggressive lane changes. Failure to follow this warning may result in loss of control of your vehicle. In some cases, this can result in serious injury or death.

- Tire repair systems are designed for use on or near original equipment Goodyear Run-Flat tires. Use of a tire repair system on tires not manufactured by Goodyear will invalidate the warranty on the repaired tire. Never exceed the maximum load capacity and inflation pressure are selected. Never exceed the maximum load capacity and inflation pressure. This is an important benefit, especially if inflation damage occurs at a location where immediately stopping your vehicle could result in serious injury or death. Only specially trained persons should mount, demount and repair Run-Flat tires, and more than 40 psi (270 kPa) may be required.

- Retreaded passenger and light truck tires are not warranted by Goodyear for any reason. Speed ratings and U.S. Department of Transportation test compliance certifications are voided for retreaded Goodyear for any reason. Run-OnFlat (ROF) tires to obtain the performance criteria stated within this Limited Warranty, Goodyear tires must use specific parts, such as a run-flat tire service bolt, McGard (or any other run-flat tire service bolt), and more than 40 psi (270 kPa) may be required.

- Troubleshooting Guide: For further information about tire care, please refer to your vehicle's Owner's Manual.

- TO PROLONG TIRE LIFE DURING A SYSTEM ALERT

- Retreaded tires are manufactured to provide the same performance and specifications as new tires. Some manufacturers may not match tire performance and specifications to new tires.

- It is not practical to accurately predict the service life of any specific tire or tire type. Tire life, as measured in miles, varies widely among tires. WHAT IS THE TIRE’S WARRANTY?
A tire’s warranty is based on the service and performance of the tire, not its condition when it was new. It is based on the tread life of the tire, its wear, and other factors.

ADDITIONAL PROVISIONS:
It is the owner’s responsibility to keep the tire in good condition. The limited warranty does not cover tire wear due to tire misuse or abuse, including improper inflation, overloading, high speed spin-up, misapplication, misuse, and lack of maintenance.

LIMITED TIRE WARRANTY
This limited warranty applies in the United States and Canada. In addition to the provisions of the limited warranty for covered warranty repairs, you may also have other rights that vary from state to state. This is your exclusive limited warranty. The tire is replaced as follows: The tire is replaced as follows:

WHAT IS COVERED AND FOR HOW LONG?
• Adjusted Policy

GOODYEAR TREAD LIFE LIMITED WARRANTY
In addition, you must pay an amount equal to the full current Federal Excise tax (U.S. only) or any other applicable taxes and government-mandated surcharges applicable to tires.

Owner’s Obligations:
You are the owner of the tire to be adjusted and must present the tire to the service center along with the following:

WHAT IS NOT COVERED BY THIS WARRANTY?
A tire has delivered its full original tread life and the coverage of this limited warranty ends when the tire is replaced or the replacement is no longer covered by the warranty.

Owner’s Obligations:
If the tire is not a Goodyear tire, you must present the tire to be replaced and the following:

TIRE & OWNER INFORMATION
• Used tires are not covered.

ADJUSTED removal and special handling fees may apply.

Owner’s Obligations:
If the tire is not a Goodyear tire, you must present the tire to be replaced and the following:

R Tại trường hợp cần thiết, thông tin chi tiết về tiện ích và sử dụng của lốp Goodyear có thể được tìm thấy tại www.goodyear.com hoặc thông qua số điện thoại 800-554-2164.

Do not spin your tires excessively
• Do not exceed 35 mph/55 kph as indicated on your speedometer.

PROPER TIRE REPAIR
In the event of a tire puncture, you should consult a Goodyear retailer or a tire professional. They will determine repairability. To avoid injury, NEVER attempt to reinflate a tire.

DO CHECK YOUR TIRES FOR WEAR
The Convenience (Temporary) Spare is designed, built and tested to the high engineering standards set by North America’s leading car manufacturers. It is designed for use on the high-speed, high-performance highways and the angular acceleration at any weather-cracking that were purchased more than four (4) years prior to presentation. The Tires will be replaced on an adjustment basis become the property of Goodyear. The tires will be replaced on an adjustment basis become the property of Goodyear.

DO CHECK YOUR TIRES FOR DAMAGE
Proper inflation pressure is necessary to ensure the proper performance, safety, and durability of your tires. This is why tire pressure monitors are required on all new vehicles. If you are unsure of your tire inflation pressure, consult the owner’s manual for the recommended tire pressure. Follow the advice of a qualified service professional or use an accurate tire pressure gauge to check inflation pressure.

DO NOT SPIN YOUR TIRES EXCESSIVELY
• Do not exceed 35 mph/55 kph as indicated on your speedometer.
