INSTALLATION INSTRUCTIONS FOR JET POWER SHIFT

**GM 4L60E & 4L80E TRANSMISSIONS**

1. Mount the Power Shift box in the desired location.

2. Connect the RED wire to a 12 volt KEYED source (the fuse box is a good choice). Make sure the power is on ONLY when the key is on.

3. Connect the BLACK wire to GROUND.

4. On the **4L60E** transmission, run the remaining two wires so that they end up on the passenger side of the transmission. On the **4L80E** run them so they end up on the drivers side of the transmission.

5. Crimp the 2 Scotch Lock connectors to the other side of the C & D terminals as shown in the drawing. On the **GM 4L80E** the wire colors are Orange & Blue. On the **4L60E** wire colors will vary.

6. Plug the connectors from the Power Shift into the connectors that you crimped onto the transmission wires. It does not matter which wire color is plugged in to either of the connectors.
