\*THIS PRODUCT MUST BE USED IN CONJUNCTION WITH THE 26400 UTILITY GEAR RAIL SYSTEM

\*\*THE BOOTTECTOR BRACKET ACCOMMODATES EITHER THE KOLPIN GUN BOOT 4 OR THE 6.0 (SOLD SEPERATELY)

### **MOUNTING INSTRUCTIONS:**

1. Mount the flat bracket (item 2) to the C-Clamp (item 1) making sure that the non-threaded boss in the C-clamp is facing the same direction as the circle cut out on the flat bracket. Use the supplied (4) ¼" x ¾" Truss head bolts and ¼" Nylock Nuts to attach.
2. Mount the Welded Bracket (3) to the C-Clamp provided with the 26400 Utility Gear Rail System in the same configuration as Step 1. Use with the hardware that was supplied with the 26400.
3. Insert the Plastic Spline through the center hole cutout in the Flat Bracket and the Welded Bracket.
4. Place the Dust Cover on the back of the Spline. Using the (4) ¼" x ¾" Truss Head Bolts, insert through the metal bracket and slide through the spline and Dust Cover. Secure the assembly with ¼" lock nuts, and tighten.
5. Place the Boottector Sheath (7) on the Spline (9). Attach using the Turn Knob (11) provided.
6. The C-Clamp will then slide onto the Aluminum Extrusion that is included in the 26400. Install the star turn knob after the bracket is on the rail, adjust to position and tighten.
7. Place Gun Boot into Sheath and secure by using the 4 - Pin Locks provided.
