Read these instructions completely before using this product.
Retain this Owner’s Manual for future reference.
FEATURES

- 3.5 in. LCD color monitor displays view from the rear of the vehicle
- Adjustable camera angle
- Camera activates automatically when the vehicle is shifted into reverse
- Weatherproof camera with 120° viewing angle
- Reduces the danger of harm or damage due to overseen objects
- Objects visible 3 feet and beyond

9. Cigarette Lighter/Accessory Socket Power Cord
Some states or local governments may have regulations or laws that restrict the use of anything that might impair the clear view of a license plate. Check local laws for compliance.

For the Back-Up Camera to be properly installed, it must be wired into the vehicle's taillight harness. If you are not comfortable or knowledgeable with 12-volt DC wiring, have the system professionally installed.

These instructions are only meant as a general guide due to the number of different makes and models of vehicles. For vehicle-specific questions, contact your vehicle's manufacturer.

1. Remove the screws that hold the license plate to the vehicle.
2. Position the camera mounting plate behind the license plate.
3. Insert the screws through the license plate and the camera mounting plate. If your hardware is not the correct length, use the supplied hardware.

Adjust the camera as required:
- To adjust the camera angle, tilt the camera to any of the five positions.
- To adjust the camera height, remove the camera adjusting screws, move the camera to line up with the desired holes and install the camera adjusting screws. Make sure the arrows on the back of the camera are pointing upward.

5. Install the license plate screws to secure the camera to the vehicle.
6. Determine which are the positive (+) and negative (-) wires for the reverse lights on the vehicle. You can use either the right- or left-side reverse light wires. For help locating the vehicle's reverse light circuit, contact your vehicle's manufacturer for vehicle-specific wiring diagrams.

7. Remove the vehicle's negative (-) battery cable.

8. Once the proper wires for the reverse lights have been determined, the transmitter wires must be spliced into the vehicle wires using the supplied wire connectors. If you choose to wire the transmitter using a different method, you must be knowledgeable in 12-volt DC electrical practices.

9. The red positive (+) wire from the transmitter splices into the positive (+) wire from the reverse lights and the black negative (-) wire from the transmitter splices into the negative (-) wire from the reverse lights.

10. Position the connector around the vehicle wire you are splicing into.

11. Slide the appropriate wire from the transmitter into the connector.
12. Crimp the metal clamp using a pliers to ensure a good connection and then close the lock of the wire connector. Do this for both the positive (+) and negative (-) wires from the reverse light.
13. Mount the transmitter in an area where the wire from the camera can be plugged into it.
14. Reconnect the vehicle's negative (-) battery cable.
15. Plug the transmitter power cord plug into the transmitter power port.

**NOTICE** Depending on your vehicle type, it may be necessary to drill a hole to route the camera wire. Before you drill a hole you MUST CHECK WHAT IS BEHIND THE DRILLING LOCATION. If there are any vehicle components, like electrical parts or fuel system components, behind the drilling location, you must take precaution not to damage them.
16. Route the wire from the camera to the transmitter. Some vehicles may have a hole to route the camera wire through; for example, the hole for the wires for the license plate light.
17. If you need to drill a hole, use a half inch (1/2" [13 mm]) drill to drill the hole. Install the plastic grommet in the hole. You must use the grommet to prevent the edge of the hole from damaging the camera wire.
18. Insert the camera wire through the grommet and route it to the transmitter.
19. Plug the camera wire plug into the transmitter camera port and secure the wire with wire ties if needed.

1. Spring-Loaded Upper Bracket
2. Lower Bracket
3. Strap Mounting Slot
4. Upper Strap
5. Lower Strap

**NOTICE** Make sure you have the correct sides of the hook and loop straps facing each other before installing them into the strap mounting slot. Once installed in the slot they are very difficult to remove.
20. Install the upper and lower straps into the mounting slots on the back of the mirror, making sure you have the correct sides of the straps facing each other.

21. Place the upper spring-loaded bracket on top of the mirror.

22. While supporting the existing rearview mirror, push down and slide the lower bracket under the mirror.

23. Using the straps, secure the mirror to the existing rearview mirror.

24. Route and secure all wires as needed.

**OPERATION**

**Testing the Back-Up Camera System**

1. Plug the 12-volt DC power plug into the port on the top of the mirror.
2. Plug the 12-volt DC power adapter into a cigarette lighter/accessory socket. Route the wires so they will not obstruct your vision when driving.
3. Press the power button. The icon on the button will be illuminated when power is on.
4. With the park brake applied, turn the vehicle ignition switch to the ON position. Do not start the vehicle.
5. Shift the vehicle to reverse to power the transmitter. The image from the camera should display on the Back-Up Camera screen on the mirror.
6. If the image does not display, check your connections and make sure the camera view is not obstructed.

**Adjust Display Settings**

1. Press the menu button to enter the menu screen.
2. Continue pressing the menu button to select brightness, contrast or color of the LCD.
3. Use the plus (+) or minus (-) button to increase or decrease the screen values.
4. To exit the menu screen, scroll to exit and press either the plus (+) or minus (-) button.
5. To display the parking guidelines, press the parking guideline ON/OFF button. This will show parking guidelines on the display.
6. Pressing the parking guideline ON/OFF button again will remove the guidelines.
CARE AND MAINTENANCE

Storage
Store this Back-Up Camera system in a cool, dry area and keep it away from direct sunlight, heat, excessive humidity and dampness.

Cleaning
Do not clean or wipe the camera or display with solvents or chemical materials. If necessary, remove dirt or stains using a soft cloth dampened with a mild detergent solution.

Fuse Replacement
1. Turn the cap on the tip of the power plug counterclockwise.
2. Remove the cap, center pin and fuse.
3. Replace the fuse with a new 1-amp fuse.
4. Replace the center pin and cap. Turn the cap clockwise.

FCC INFORMATION

⚠️ WARNING ⚠️ Changes or modifications to this equipment not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTICE
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the transmitter.
• Increase the separation between the equipment and monitor.
• Connect the equipment into an outlet on a circuit different from that to which the monitor is needed.
• Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation of device. The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate this equipment.
