

# TRANSMISSION CHEMICALS

## *OEM's use LUBEGARD®...shouldn't you?*

- Softens harsh shifts with no loss of lock-up time
- Eliminates objectionable noises during shifts
- Inhibits oxidation and overheating
- Eliminates hung-up governors
- Optimizes overall transmission performance
- Prevents clutch chatter
- Increases fluid life
- Prevents lock-up torque converter shudder
- Keeps valves free
- OEM endorsed

**PIONEER**  
Automotive Industries

## LUBEGARD® Transmission Fluid Supplement

(U.S. PATENT 4,873,008)

PIONEER NUMBER **T-4001**  
**T-4001-12**

LUBEGARD® Automatic Transmission Fluid Supplement is for use in all automatic transmissions including heavy duty transmissions, such as Allison. Lubegard is for use with Dexron II and type F automatic transmission fluids. Lubegard controls heat and is especially effective in today's hotter running front wheel drive vehicles. It contains Liquid Wax Esters and their derivatives, Base oils and conventional additives.

LUBEGARD® is designed to raise the thermal and oxidative stability level of automatic transmission fluid, so when it operates at elevated temperatures, it does not thin out and pyrolyze/burn or react with oxygen and form deposits.

### LUBEGARD® ATF SUPPLEMENT benefits are:

- Transmissions perform more efficiently at lower operating temperatures.
- Anti-chatter in clutch packs (allow overnight penetration for maximum benefit).
- Anti-shudder with converter clutches (allow overnight penetration for maximum benefit).
- Prevents overheating.
- Assists in freeing hung up governors.
- Keeps valves free. Frees stuck valves in valve bodies.
- Provides for smoother shifting and reduced drive train power losses.
- Helps modify harsh shifts and makes them quicker in duration.
- Prevents costly comebacks.
- Maintains proper ATF viscosity in the torque converter.
- Inhibits transmission fluid foaming and oxidation, thereby extending fluid life.
- Reduces transmission wear.

The use of LUBEGARD® ATF Supplement will not cause clutch friction upset or slippage.

*Dr. Tranny*

# Kooler Kleen

## FOR AUTOMATIC TRANSMISSION APPLICATIONS

TRANSMISSION CHEMICALS

DR. TRANNY'S Kooler Kleen is a uniquely blended formula designed to prevent transmission contamination by eliminating contaminants such as sludge, grime and metal shavings in transmission cooling systems and lines without leaving any water / soapy residue (or harmful chemicals) in the system. It is packaged in easy to use convenient aerosol cans – simply attach to radiator inlet (or outlet) lines and actuate to flush system to avoid transmission cross contamination. Flush out cleaning liquid by inverting can and actuating or use compressed air from your facility compressor.

### Benefits:

- No water / soapy residue to contaminate new ATF
- Prevents contamination of new or rebuilt unit
- Prevents costly comebacks
- Contains no ozone depleting chemicals or CFC's
- Contains no chlorinated solvents
- Formulated to not harm seals or degrade new ATF

PIONEER NUMBER **T-4002**  
**T-4002-12**

## LUBEGARD® Highly Friction Modified Transmission Fluid Supplement

PIONEER NUMBER **T-4003**  
**T-4003-12**

LUBEGARD® Highly Friction Modified Automatic Transmission Supplement enhances DEXRON®II/III fluid with additional friction modifiers. The enhanced DEXRON®II/III fluid is a replacement for Original Equipment Manufacturers' fluids such as Honda Genuine, Toyota Genuine, Chrysler 7176 and similar other applications requiring highly friction modified ATF.

LUBEGARD® ATF-HFM is designed only for use with Dexron® II/III fluid in transmissions found in Hondas, Toyotas, Chryslers using 7176 Fluid, and other applications requiring highly friction ATF.

LUBEGARD® ATF-HFM formulation is based on the same patented technology found in LUBEGARD® ATF Protectant that has gained worldwide acceptance in the professional after-market transmission repair industry and Original Equipment Manufacturer (OEM) endorsement.

TRANSMISSION CHEMICALS

## Dr. Tranny™ Assemblee Goo™

PIONEER NUMBER **T-4004**  
**T-4004-12**

Dr. Tranny Assemblee Goo™ is formulated for use as an assembly aid and lubricant for automatic and manual transmissions. To provide lubrication and facilitate the assembly process, apply to: 'O' rings, seals, bearings, gaskets, sealing rings, bushings and thrust washers.

Assemblee Goo™ will not melt at shop temperatures (up to 130°F) and provides "tackiness" required during the assembly process. Yet it dissolves and solubilizes in transmission fluids at operating temperatures so as not to clog filters.

The green color eliminates misdiagnosing leaks. And it is not harmful with prolonged skin contact.

Dr. Tranny™ Assemblee Goo™ Benefits:

- Provides "tackiness" required during assembly process
- Facilitates and provides lubrication during transmission assembly process
- Dyed green to prevent misdiagnosing leaks
- Will not melt at shop temperatures
- Not harmful with prolonged skin contact
- Will not clog filters

# TRANSMISSION CHEMICALS, Continued:

Dr. Tranny™

## Instant Shudder Fixx™

PIONEER NUMBER **T-4006**  
**T-4006-24**

Dr. Tranny™ Instant Shudder Fixx™ is a concentrated friction modifier formulated specifically for eliminating torque converter shudder problems instantly.

Available in a uniquely engineered two-ounce application tube, the Dr. Tranny™ Instant Shudder Fixx™ is compatible with conventional or synthetic automatic transmission fluids.

Dr. Tranny™

## Assemblee Luub™

PIONEER NUMBER **T-4007**  
**T-4007-12**

Dr. Tranny™ Assemblee Luub™ is the same premium quality lubricant fluid as LUBEGARD® Valve and Assembly Lubricant in a convenient aerosol spray.

TRANSMISSION CHEMICALS

## LUBEGARD® Valve and Assembly Lubricant

PIONEER NUMBER **T-4008**  
**T-4008-6**

LUBEGARD® Valve and Assembly Lubricant is specially designed for the assembly of transmissions, engines, gear boxes, pumps or any other general automotive use. It also can be used as a general purpose lubricant. This unique product contains LXETM (Liquid Wax Esters), and their derivatives, that strongly attach to metal surfaces giving superior lubrication of valves and governors, thus enhancing valve performance. It protects the equipment and is non-harmful to the user. The active ingredients of LUBEGARD® Valve and Assembly Lubricant do not contain solid particles or cheap petroleum solvents that provide no lubrication properties. This product is based on the same technology found in LUBEGARD® Automatic Transmission Fluid Protectant, that is approved and used by OEM's (Original Equipment Manufacturers). LUBEGARD® Valve and Assembly Lubricant, although compatible with all automatic transmission fluids, is not formulated to be added straight to an automatic transmission fluid as a supplement.

LUBEGARD® Valve and Assembly Lubricant benefits:

- Specially designed for automotive equipment rebuilders, but great for general lubrication needs.
- Keeps valves and governors free during assembly
- Easy to use, simplifies and expedites the transmission assembly process
- New Biosynthetic formula with superior cold flow properties
- Environmentally responsible (Biodegradable), user friendly
- Specially formulated and blended using LXETM (liquid wax esters) and their derivatives to enhance valve performance and help facilitate the assembly process, the LXETM strongly attaches to the metal surfaces giving superior lubrication
- Excellent penetrant and protects against rust
- Not harmful to seals or O-rings
- Optimum to use with LUBEGARD® Fluid products after the rebuild

## Lubegard® M-V Automatic Transmission Fluid Supplement

FOR MERCON V® APPLICATIONS ONLY

U.S. Patent: 5,282,989  
Synergol Patent Pending

PIONEER NUMBER **T-4009**

### LUBEGARD® M-V Automatic Transmission Fluid Supplement benefits:

- For use in all automatic transmissions requiring a Mercon V® type ATF.
- Prevents & Eliminates Torque Converter Lock-Up Shudder.
- Prevents overheating and fluid oxidation.
- Saves time, money and space by eliminating the need to stock Mercon V® ATF.
- Keeps valves free - also frees stuck valves.
- Dramatically reduces friction & wear on metal parts and internal components.
- Improves low temperature shifting.
- Stabilizes the life of the fluid, thus extending service intervals.
- Softens harsh shifts.
- Extends fluid & component life.
- Will not harm yellow metals.
- Will not alter the crucial phosphorus or sulfur balance in your transmission fluid.
- Contains absolutely NO Zinc.

**DIRECTIONS:** For normal applications, add 1 oz per quart of Dexron®/Mercon® Automatic Transmission Fluid. Replace with motor idling and in park. \* Always check owners manual or dip stick for proper fluid type. Do not overfill.

# Lubegard® Limited Slip Supplement

FOR USE IN ALL FINAL DRIVES AND LIMITED  
SLIP POSI-TRACTION UNITS

PATENT 5,282,989

PIONEER NUMBER **T-4011**

T-4011 LIMITED SLIP SUPPLEMENT is specifically formulated for the clutches in limited slip differentials. Limited slip differentials depend on the operation of pre-loaded clutch packs on each axle shaft. Gear oils made for standard differentials DO NOT contain the additives that make these clutches work. LUBEGARD® Limited Slip Supplement contains LXE (liquid wax esters), a unique advanced friction modifier to eliminate chatter. It contains rust and corrosion inhibitors to protect bearing and gear surfaces. The LXE also acts as an enhanced heat transfer component to pull heat out of the gear box and clutches more quickly for cooler running units. LUBEGARD® Limited Slip Supplement benefits all makes of vehicles with limited slip differentials including GM, Ford and Chrysler.

#### *DIRECTIONS FOR USE:*

*Put entire contents of the bottle (4 fl. oz.) into the differential. If necessary, remove enough gear oil to maintain proper level with supplement. Allow 20 miles of road operation for complete mixing.*

# Remember the final step...

## Install an In-Line Magnetic Filters!

PIONEER NUMBER **745119 - 5/16"**

PIONEER NUMBER **745200 - 3/8"**

**Contaminated transmission fluid can ruin even the best rebuild –** An automatic transmission produces millions of tiny metal particles caused by normal wear and tear, many of which remain in the cooler. Even the best flusher cannot remove all of the metal. When the vehicle returns to the road after the rebuild, this metal comes loose, contaminating the new fluid.

In modern Front Wheel Drive and Electronically Controlled Transmissions, all of the fluid from the cooler does not return directly to the pan. It returns through the lube circuit and from there it can go anywhere in the transmission. Some will return to the pan, some to the valve body and solenoid valves, also to circuits leading to bearings, clutch plates and seals. This unfiltered fluid can now wreck even the best rebuild. Prevention is always your best policy.

### HOW MAGNETIC DUAL FILTRATION WORKS FOR YOU:

With the In-Line Magnetic Filter installed, the fluid first passes over a powerful magnet, which extracts metal particles, regardless of size.

It then passes through a fine pleated paper element which filters out dirt, clutch fibers, and alloys. This unique dual filtration system removes all damaging particles. A specially designed safety by-pass valve maintains full flow under all circumstances.

### INSTALLATION TIPS:

- Always install using new cooler hose.
- Never over tighten clamps.
- Recommended to flare metal cooler line, for a totally reliable seal.

# TRANSMISSION IDENTIFIERS

## KM Series for HYUNDAI AND MITSUBISHI

### 1979 TO 1989

Transmission number is found on top of the case.  
(Only the first three numbers are used.)

First Number	Second Number	Third Number is design change
3 = RWD	KM17(1)	KM171-1
4 = AWD	KM17(2)	KM171-2
7 = FWD	KM17(5)	KM175-5
	KM17(6)	KM176-5
	KM17(7)	KM177-8

Example: 4550710    Transmission is 4WD KM175, Fifth Design

### 1990 TO Present

- Transmission number is found on top of the case.
- Only 2nd, 3rd, and 4th digits are used.
- Second indicates the number of speeds
- Third and fourth number together indicates the torque.
- Replace the first number with F
- Place an A between the second and third number.

Example: 13220710    Transmission is F3A22

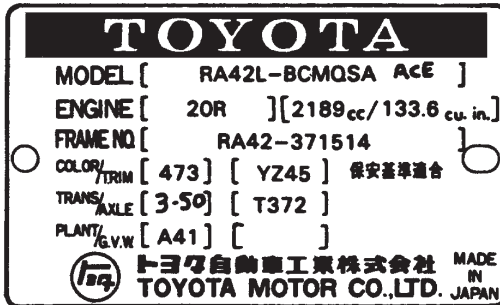

OLD	NEW
KM171	F3A21-2
KM172	F3A22
KM175	F4A22-2
KM176	F4A21-2
KM177	F4A22-3

# TRANSMISSION IDENTIFIERS

## TOYOTA MOTOR CO., LTD.

### TOYOTA TRANSMISSION IDENTIFICATION ON VEHICLE ID TAG

TO 7-31-80

FROM 8-1-80

### HOW TO FIND TRANSMISSION TYPE FROM TRANSMISSION TAG OR CASE ID:

If the vehicle tag is not available the transmission can be identified by the following code which is found either on the transmission tag or molded on the case.

CASE I.D.	TYPE
03-50	A40D
03-51	A40D
03-55	A40
03-56	A41
03-60	A40D
03-70	A42D/AW70
03-70L	A42DL
03-71	A43D/AW71
03-71L	A43DL
03-71LE	A43DE
03-72	A44L
03-72L	A44DL
03-75	A43 Trucks
AW372	A43D

TRANS. CODE OR TAG NO.	TRANS. TYPE
AE-82	A130L, A131L
AL-21	A55
AL-25	A55F
AW-11	A141E
CE-80	A240E, A240L
CV-10	A140E
HJ-60	A440F, L
RN-61	A340E
RN-66	A340H
ST-161	A142L
SV-11	A140L
SV-25	A540EN

# EXTERNAL SEAL ASSORTMENT KIT

PIONEER NUMBER **758000**

# 4L60 (700-R4) SOLENOID WIRING HARNESSES

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### 3-4 SHIFT SOLENOID for A4LD – 1987-95

PIONEER NUMBER **771001** 26 to 40 ohms

- NOTE:**
1. There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.
  2. 771001 3-4 Shift has a black back cover and the 771011 Lock-up has a silver back cover.

**1. To Remove:** Before removing the valve body, label wire pairs. Unplug the electrical wires that attach the 3-4 solenoid leads. The valve body on all A4LD transmissions must be removed before any of the solenoids can be replaced.

**Caution:** During disassembly internal components will dislodge and fall out.

2. After the valve body has been removed, the separator plate must be removed. Now remove the retainer clip that keeps the solenoid in place. Cut the wires as close as possible to the Shift solenoid.

3. After the solenoid is removed, locate the aluminum sleeve/plug in the 3-4 solenoid bore position. Remove and discard.

4. **To Install:** Install the aluminum sleeve furnished in the kit (Figure 2). The solenoid and retaining clip may now be installed. When installing the separator plate and valve body, be sure to tighten all bolts to factory specifications.

5. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (Figure 3).

6. Install the "Y" connector (Figure 4) to the positive center wire, so there will be voltage to both solenoids. The lock-up solenoid has red wires, and the 3-4 solenoid has blue wires.

The easiest way to keep track of wire location is to remember the positive center wire goes to both solenoids. The wire located to the rear of the transmission is the lock-up ground. The lock-up solenoid is located nearest the front of the transmission. The wire located closest to the front of the transmission is the 3-4 ground. This is the solenoid located to the rear. Make wire connections as shown in Figures 3 and 4.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### LOCK-UP SOLENOID

for 200-4R (1981-90), 700-R4 (1982-93),  
4L60E (M30) (1993-2000)

PIONEER NUMBER **771003** 20 to 40 ohms

**NOTE:** The 771003 contains a diode. Polarity must be observed when connecting.

Figure 1

1. To Remove the old solenoid from the transmission, cut the wires from the old solenoid as close as possible to the metal base (Figure 1).

2. Each wire cut from the old solenoid must be stripped back approx. 1/2" and the braided wire twisted to form a tight strand, (Figure 2). Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections.

3. To Install one-wire solenoids: All solenoids having only one wire are grounded internally. New solenoid black wire is the ground wire. Attach the black grounding pigtail wire furnished in the kit to the new solenoid black wire as shown in Figure 3. This should be grounded with the installation bolts for the solenoid. The red wire on the new solenoid needs to be connected to the single wire you cut off the old solenoid. The solenoid is ready now for installation.

Figure 3

4. To Install two wire solenoids: Connect the black wire from the harness to the black wire on the new solenoid. Connect the other wire from the harness to the red wire. When this is completed, the harness is ready for installation.

Figure 4

**Caution:** The Solenoid contains a diode. Polarity must be observed.

5. To Install in 200-4R: Remove the two studs and nuts from the 200-4R hardware package. Screw the two studs into the case and tighten firmly with a wrench (Figure 4).

Figure 5

**Do not use an impact wrench.**

Insert the new solenoid into the transmission in the normal method until it comes to rest on the top of the studs (Figure 5). Use the nuts furnished to tighten the solenoid in place. If this is a one-wire system, be sure to attach the black pigtail wire to a convenient valve body bolt as a ground.

6. To Install in 700-R4 & 4L60E: **Do not use** the 200-4R hardware on the 700-R4 or the 4L60E. Simply install the solenoid as any other 700-R4 or 4L60E. If this is a one-wire system, be sure to attach the black pigtail wire to a convenient valve body bolt as a ground.

**Caution:** Make sure the wires are not touching the throttle assembly.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### LOCK-UP SOLENOID for 125C (82-98), 200C (78-87), 325-4L (82-85) & 440-T4 (84-93)

PIONEER NUMBER **771004** 20 to 40 ohms

**NOTE:** The 771004 contains a diode. Polarity must be observed when connecting.

**1. To remove:** Cut the wires from the old solenoid as close as possible to the metal base as shown in (Figure 1).

**2.** Strip back both wires approx. 1/2" and twist the braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all other connections (Figure 2).

**3. Solenoids having only one wire** are internally grounded. The new solenoid black wire is the ground wire. Attach the black grounding pigtail wire furnished in the kit to the new solenoid black wire (Figure 3). This should be grounded with the installation bolts for the solenoid. The red wire on the new solenoid needs to be connected to the single wire, which was cut off the old solenoid.

**4. For two-wire solenoids,** connect the black wire from the harness to the black wire on the new solenoid. Connect the other wire from the harness to the red wire. **Caution:** The 771004 Lock-Up Solenoid contains a diode. Polarity must be observed.

**5. To Install 200C:** The new solenoid has two break-off tabs (Figure 4). To install on the 200C, break off the long tab, and install using the washer on the tab side (Figure 5).

**6. To Install 325-4L:** The new solenoid has two break-off tabs. To install to the 325-4L, break off the short tab and install using the washer on the tab side (Figure 6).

**7. To Install 125C:** Break off both tabs and install with the original torx head bolt (Figure 7).

**8. To Install 440-T4:** Break off both tabs and snap on the 440-T4 adapter, Figure 1, over the existing solenoid tip. Only one bolt is necessary when installing the 440-T4 (Figure 7).

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS LOCK-UP SOLENOID for A4LD – 1985-95

PIONEER NUMBER **771011** 26 to 40 ohms

**NOTE:** 1. There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid. 2. 771001 3-4 Shift has a black back cover and the 771011 Lock-up has a silver back cover.

**1. To Remove:** Before removing the valve body, label wire pairs. Unplug the electrical wires that attach the lock-up solenoid. The valve body on all A4LD transmissions must be removed before any of the solenoids can be replaced.

**Caution:** During disassembly, internal components will dislodge and fall out.

Figure 1

**2.** After the valve body has been removed, the separator plate must be removed. Now remove the retainer clips that keep the solenoid in place. Remove the Lock-up solenoid. Cut the wires as close as possible to the Lock-up solenoid.

**3. To Install:** The solenoids and retaining clips may now be installed. When installing the separator plate and valve body, be sure to tighten all bolts to factory specifications.

Figure 2

**4.** Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections. See **Figure 2**.

**5.** The Lock-up solenoid has red wires, and the 3-4 solenoid has blue wires. The easiest way to keep track of wire location is to remember the positive center wire goes to both solenoids. The wire located to the rear of the transmission is the lock-up ground.

Figure 3

The Lock-up solenoid is located nearest the front of the transmission. The wire located closest to the front of the transmission is the 3-4 ground. This is the solenoid located to the rear. Make wire connections as shown in **Figures 2 and 3**.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### MCCC (LOCK-UP) SOLENOID for AODE/4R70W 1992-94, early 1995

PIONEER NUMBER **771016** 1 to 3 ohms

**CAUTION:** There are two types of solenoids, each having different resistance. To determine which ohm of resistance is required for the MCCC (Lock-up), the most accurate method is to use a multi-meter to insure the resistance of the original lock-up solenoid.

#### 1. To Remove:

Remove the dual shift solenoid by first unplugging the harness. Remove the two bolts holding the dual solenoid to the valve body. One of the bolts may secure both the dual solenoid and the MCCC (Lock-up).

Figure 1

Pull out the dual solenoid, and remove the MCCC Lock-up solenoid.

#### 2. To Install:

Insert the new MCCC solenoid (Figure 2). Then, install the dual shift solenoid into the valve body, as shown in Figure 1. Tighten the bolts to specification. Plug the OEM harness connector into the dual solenoid, and connect the MCCC Lock-up solenoid.

Figure 2

**NOTE:** If small O-ring is cut during installation, lock-up occurs immediately on 2nd gear shift. Therefore a second O-ring is provided.

## INSTALLATION INSTRUCTIONS

### DUAL PACK SHIFT SOLENOID for AODE/4R70W ('92 to '97)

PIONEER NUMBER **771017** 20 to 40 ohms

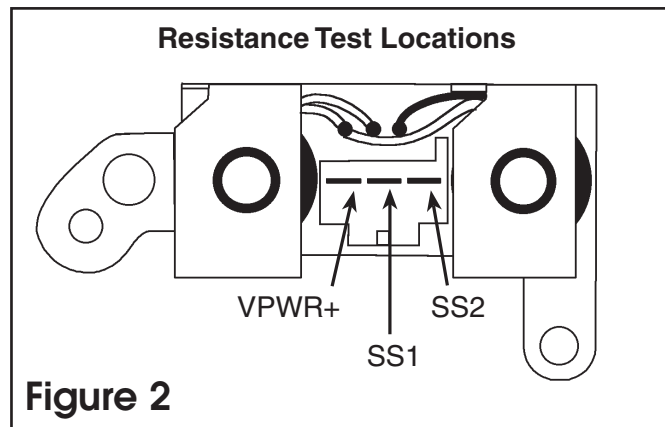

1. **To Remove:** Unplug the harness from the old solenoid. Remove the two bolts holding the old solenoid to the valve body. One of the bolts secures both the dual solenoid and the MCCC (Lock-up). Pull the dual solenoid directly out and discard.

2. **To Install:** Insert the Dual Shift Solenoid into the valve body (**Figure 1**).

Check the Resistance Test Locations (**Figure 2**). VPWR+ to SS1 resistance is 20 to 25 ohms. VPWR+ to SS@ resistance is 20 to 25 ohms. Tighten the bolts to specification. Plug the OEM harness connector into the center of the new dual solenoid.

**NOTE:** Some models may have the retaining bolts positioned differently.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### MCCC (LOCK-UP) SOLENOID for AXODE/AX4S 1991-96 Lincoln, 1992-97 Vehicles

PIONEER NUMBER **771019** .98 to 1.6 ohms

**WARNING:** Square Solenoid #771019 replaces square OEM Solenoid. **DO NOT INTER CHANGE LOCK-UP & MCCC SOLENOID! DO NOT REPLACE ROUND SOLENOID WITH SQUARE SOLENOID. THIS WILL CODE COMPUTER!**

1. To Remove the old MCCC Lock-up solenoid, unplug the harness from the old solenoids, and remove the four 8mm bolts holding the EPC and MCCC Lock-up solenoids to the valve body (**Figure 1**). Remove the EPC solenoid. Remove MCCC Lock-up solenoid.
2. **To Install:** Insert the new MCCC Lock-up solenoid (**Figure 2**), into the valve body. Reinstall the EPC solenoid in the valve body. Insert and tighten the four retaining bolts shown in **Figure 1**.
3. Connect the new MCCC Lock-up solenoid by plugging it into the wiring harness.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### PWM SOLENOID for 4L60E (1993-2000) 4L60E 3-2 DOWNSHIFT SOLENOID ('95 only) TCC SOLENOID for 4L80E (1991-2000)

PIONEER NUMBER **771021** 9 to 14 ohms

**NOTE:** 1. There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid. 2. Do not use in 3-2 downshift position in '96-up. This may code computer.

1. The PWM/TCC Solenoid can be installed exactly as shipped on the 4L60E. When using the solenoid in the 4L80E, remove the O-ring from the second O-ring land (Figure 1), and replace it with the new O-ring in the package.

4L60E=Thicker O-ring

4L80E=Thinner O-ring

2. **To Remove:** The PWM solenoid is located toward the front of the valve body on both 4L60E and 4L80E (Figures 3 & 4). To remove, simply unplug the connector, pull the retaining clip straight down (Figure 4), and pull forward on the PWM solenoid.

**Figure 3**  
4L60E

3. **To Install:** Install the new solenoid in reverse manner.

**Figure 4**  
4L80E

#### 1996 & UP

**Figure 2**

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### PWM SOLENOID for 4T60E – 1991-97

PIONEER NUMBER **771022** 9 to 14 ohms

**NOTE:** There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.

**1. To Remove:** The PWM solenoid can be located using **Figure 1**. Remove the retaining clip and pull forward on the PWM solenoid.

**2.** Cut the solenoid plug from as close as possible to the connector plug. The new PWM solenoid is furnished with our patented Posi-Lock™ Connectors.

**3.** After you have cut the plug from the harness, strip back the insulation approximately 1/2" and twist the braided wire to form a tight strand (**Figure 2**). Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections.

The wire is now locked in position. As part of the design of the Posi-Lock™ Connector, no insulation can penetrate the locking chamber. Therefore, if the wire is tight you have positive lock. There is no need to check for continuity.

**4. To Install:** Reinstall solenoid in a normal manner.

**NOTE:** There may be a clearance problem between the pan and the PWM Solenoid. If this occurs, bend the pan to accommodate the fit.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### SHIFT/LOCK-UP SOLENOID

for 4T60E – 1991-97  
**SHIFT SOLENOID**  
for 4L60E – 1993-2000

PIONEER NUMBER **771023** 20 to 40 ohms

**NOTE:** There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.

1. To remove 4L60E shift solenoids, simply pull the solenoid retaining clip and pull forward on the shift solenoid. Label each pair of wires so as not to confuse the solenoids.

#### 2. To Install:

The A shift position solenoid should be installed in the reverse manner. When installing the B shift position solenoid, there is a clearance problem with one of the valve body attaching bolts (**Figure 1**). Remove the bolt that is directly under the 2-3 solenoid. Replace this bolt with the torx-head bolt furnished with the new solenoid (**Figure 2**).

Figure 2

3. To remove 4T60E shift solenoids: After the side pan has been removed, unplug wires to the solenoid. Remove retaining clip and pull out solenoid (**Figure 3**).

4. To Install: Cut the original plug from the wiring harness as shown in **Figure 3**. Push the solenoid back into its original position and replace the clip. **NOTE: Make sure shift solenoid is pushed all the way in when installing U-clip.**

Figure 3

5. Cut the plug off the new solenoid as close as possible to the plug. Strip back the cut wires approximately 1/2" as shown in **Figure 4**. Grasp the wires firmly to avoid pulling the insulation from the winding. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections. The solenoid is self-cleaning constantly when not in use, for trouble-free performance. A true aftermarket product.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### SHIFT SOLENOID for GM 4L80E – 1991-2000

PIONEER NUMBER **771024** 20 to 40 ohms

**NOTE:** There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.

**1. To Remove:** Unplug the solenoids pictured in (Figure 1). When installing the new shift solenoid in B position there will be a clearance problem with one of the reverse servo bolts (Figure 2 & 3). Remove the bolt that is located directly under the B solenoid. Replace this bolt with the torx-head bolt furnished with the solenoid.

**Figure 3**  
**Note:** Shift Solenoid B servo bolt must be removed and discarded. Replace with torx-head bolt.

**2. To Install:** Insert and reconnect the solenoids. The wire pairs must be reconnected to the correct position previously labeled. The shift solenoids are the same, but the solenoid A wire must be connected to the shift solenoid placed in the solenoid A bore. Likewise for solenoid B.

## INSTALLATION INSTRUCTIONS

# SHIFT SOLENOID

### for AXODE/AX4S – 1991-97

PIONEER NUMBER **771026** 15 to 25 ohms

**1. To Remove:** Depress the spring tab and twisting the solenoid to the left until it clicks (Figure 1). Pull the old solenoid from the valve body.

**2. To Install:** Insert the new Shift Solenoid (Figure 2) into the valve body and secure by twisting to the right until it clicks. Connect wiring harness.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### GM (FORCE MOTOR) EPC SOLENOID for 4L30E (1989-92), 4L60E (1993-2000), & 4L80E (1991-2000)

PIONEER NUMBER **771027** 20 to 40 ohms

**NOTE:** There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.

1. Cut the OEM solenoid connector ends from the wiring harness as close as possible to the plug. Remove the retaining clip. Pull the solenoid from the valve body (Figure 1).

2. Strip back the insulation approximately 1/2" from each wire cut from the wiring harness. Twist the braided wire to form a tight strand (Figure 2). Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections.

3. When reconnecting the solenoids, polarity is not a critical issue. Connect the solenoid with the Posi-Lock™ terminal to the OEM harness.

4. To install the force motor, use the original retaining bolt and clip. Tighten the bolts according to normal OEM specifications (Figure 3). Reinstall the filter.

5. Test drive the vehicle to perform shift test. After driving the vehicle, it may be necessary to make the shift firmer or softer. To accomplish this, adjust the force motor solenoid. You will need a 3/8" and 5/8" wrench.

**Caution:** Do not remove wrenches until adjustments are complete.

With one wrench on the adjuster and one on the lock nut, hold the 3/8" wrench still while breaking the 5/8" lock nut loose. Move the 3/8" adjuster one-sixth turn. To increase the pressure, turn clockwise. To decrease the pressure, turn counterclockwise. While still holding the 3/8" adjuster, tighten the 5/8" lock nut.

#### Line Pressures FOR 4L60E:

Gear Range	Line Pressure
Drive, Park or Neutral	50-189
Reverse	67-324

#### Line Pressures FOR 4L80E:

Gear Range	Line Pressure
Drive, Park or Neutral	50-171
Reverse	67-324

These are idle pressures to wide open throttle pressures.

INSTALLATION INSTRUCTIONS

## **MCCC (LOCK-UP) SOLENOID** **for AXODE/AX4S** **1997-up Lincoln,** **1998-2000 Taurus and Sable**

PIONEER NUMBER **771028** .13 to 24 ohms

Use this solenoid as replacement in only those models originally equipped with OEM solenoids having a blue connector. If in doubt, it is advisable to check the

resistance of the solenoid being replaced. Follow the Installation Instructions for 96952 shown above.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### MCCC (LOCK-UP) SOLENOID for AODE/4R70W late 1995, 1996-97

PIONEER NUMBER **771030** 10 to 16 ohms

**CAUTION:** There are two types of solenoids, each having different resistance. To determine which ohm of resistance is required for the MCCC (Lock-up), the most accurate method is to use a multi-meter to insure the resistance of the original lock-up solenoid.

**1. To Remove:** Remove the dual shift solenoid by first unclipping the harness. Remove the two bolts holding the dual solenoid to the valve body.

One of the bolts secures both the dual solenoid and the MCCC (Lock-up). Pull out the dual solenoid, and remove the MCCC Lock-up solenoid.

Figure 1

**2. To Install:** Insert the new MCCC solenoid (Figure 2).

Then, install the dual shift solenoid into the valve body as shown in Figure 1. Tighten the bolts to specification. Plug the OEM harness connector into the dual solenoid, and connect the MCCC Lock-up solenoid.

Figure 2

**NOTE:** If small O-ring is cut during installation, lock-up occurs immediately on 2nd gear shift. A second O-ring is provided with the solenoid.

## INSTALLATION INSTRUCTIONS

### 3-2 DOWNSHIFT ON/OFF SOLENOID for 4L60E 1996-2000

PIONEER NUMBER **771031** 20 to 31 ohms

**NOTE:** Do not use early 9-14 ohm solenoid in place of 20-31 solenoid.  
**THIS COULD DAMAGE THE COMPUTER.**

1. The 4L60E 3-2 downshift on/off solenoid has 20-31 ohms resistance. It is identified with a white and red wire, with a black connector. The 3-2 downshift on/off solenoid is located at the front of the valve body nearest to the manual valve. (Figure 1)

2. To remove, simply unplug the wires. Then pull the retaining clip straight down and pull forward on the on/off solenoid.

3. To install the new downshift on/off solenoid, follow the above directions in reverse.

**Figure 2**

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS **LOCK-UP SOLENOID** for AXOD 1986-90 AXODE 1991 ONLY for Taurus & Sable

PIONEER NUMBER **771032** 21 to 36 ohms

**NOTE:** For '91 Taurus & Sable: The lock-up solenoid must be installed with the plastic adapter, two longer bolts, washer, and bracket spacers under bracket. See Figures 2 & 3 for details.

**WARNING:** Square Solenoid 771032 replaces square OEM Solenoid. **DO NOT INTERCHANGE LOCK-UP & MCCC SOLENOID! DO NOT REPLACE SQUARE SOLENOID WITH ROUND SOLENOID. THIS WILL DAMAGE COMPUTER!**

- 1. To remove:** Remove the valve body cover (side pan).
- 2. Unplug the harness from the old lock-up solenoid, and remove the four 8mm bolts holding the EPC and Lock-up solenoids to the valve body (Figure 1). The shorter of the four bolts will not be used for the installation of the new Lock-up solenoid.**

- 3. To Install:**  
For AXODE '91, Taurus and Sable, the Lock-up solenoid must be installed with the adapter (Figure 2), with the O-ring away from the solenoid.

- 4. Place washer furnished with the new solenoid under the existing EPC bracket. Install spacers shown in (Figure 3).**
- 5. Place the Lock-up solenoid on top of the spacers and install retaining bolts furnished with the new solenoid. Torque to OEM specification (7 to 9 ft. lbs.).**

**Note: Spacers are not required for the AXOD transmission.**

- 6. Connect wiring harness and install side pan with new gasket. Connect wiring harness.**

ELECTRICAL COMPONENTS

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### A&B SHIFT SOLENOID for KM-175, 176, & 177 SERIES for F4A21-1, F4A22-2 & F4A23-2 1987 - 97

PIONEER NUMBER **771033** 20.8 to 23.8 ohms

**NOTE:** Some O.E.M. shift solenoids have a large stem with an O-ring. 771033 Solenoids are surface sealed and retrofit all.

- To Remove:** Disconnect the negative battery cable, drain the ATF out of unit, and remove the pan.
- Remove the transmission filter. Note length of bolts.
- Remove solenoid wiring harness case plug from case. Remove ten (10) valve body bolts, noting the different length bolts: 20 mm, 28 mm and 45 mm.

- Remove valve body. The manual valve can come out – **be careful not to drop it.**
- Remove solenoids from valve body. Cut wires from old solenoid as close to metal base as possible. Keep track of solenoid wire locations to match correct solenoid wires back to the original solenoid positions (**Figure 1**).
- To Install:** Attach black ground wire with eyelet to the same bolt that was used originally. Cut original grounding wire from OEM eyelet.
- Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (**Figure 2**).
- Install the new solenoids on the valve body (**Figure 1**). Place over the opening, insert solenoid bolts through the valve body and into threaded holes of solenoid housing.

Start both bolts by hand, then tighten to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).

- Make sure the O-ring is still on the upper surface of the valve body, at the place shown in **Figure 1**.
- Reinstall the valve body into the transaxle, then insert the solenoid wiring harness case plug into the case. Be sure the notched part of the connector is in the proper place. Also check that the lead wire isn't caught between case and valve body.
- Tighten the ten (10) valve body bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
- Install new filter, tighten four bolts to 6 to 6.5 Nm (4 to 5 ft. lbs.).

**Helpful Hint:** While installing the new filter, insert a pick (or paper clip) through the lock-up retaining plate, and work the valve while tightening filter bolts. This will keep the valve from binding.

- Install new oil pan gasket and oil pan, tighten bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
- Connect the negative battery cable.
- Fill unit with ATF and check fluid level with engine running and in "Park".

## INSTALLATION INSTRUCTIONS

### DCC (LOCK-UP) 1987-92, early '93 EPC SOLENOID 1987 to 1997 for KM-175, -176, & -177 Series for F4A21-1, F4A22-2 & F4A23-2

PIONEER NUMBER **771034** 2.6 to 3.2 ohms

**NOTE:** These solenoids will work for KM-175, 176 and 177 Series transmissions. The 3 ohm solenoid will work on all year models in the EPC position. It also is used in the DCC position on Mitsubishi vehicles prior to '93, and on later Hyundai and Chrysler vehicles. **IF A 3 OHM RESISTANCE SOLENOID IS USED ON A SYSTEM REQUIRING A 13 OHM SOLENOID, THE COMPUTER WILL BE DAMAGED.** There are two methods to determine which ohms of resistance DCC (Lock-up) solenoid is needed.

1. The most accurate method is to use a multi-meter to measure the resistance of the original lock-up solenoid.
2. If the external transmission wiring harness has a red wire with a black tracer (black stripe), a 13 ohm range solenoid is required. If the wire is solid red in color, it will require a 3 ohm range solenoid.

The DCC Lock-up solenoid is the only solenoid with a resistance change. The EPC solenoid is 3 ohms of resistance.

**NOTE:** For '85-'88 Mitsubishi Galant (2.4 L engine) KM 175-1, an aluminum plug/gasket adapter will be required. If you can see through the valve body where the Pressure Control and/or Lock-up solenoids seat, call our Hotline for a free-of-charge adapter and gasket.

1. **To Remove:** Disconnect the negative battery cable, drain the ATF out of unit, and remove the pan.
2. Remove the transmission filter. Note length of bolts.
3. Remove solenoid wiring harness case plug from case. Remove ten (10) valve body bolts, noting the different length bolts: 20mm, 28mm and 45mm.

4. Remove valve body. The manual valve can come out – **be careful not to drop it.**
5. Remove solenoids from valve body, cut wires from old solenoid as close to metal base as possible. Keep track of solenoid wire locations to match correct solenoid wires back to the original solenoid positions (**Figure 1**).
6. **To Install:** Attach black ground wire with eyelet to the same bolt that was used originally. Cut original grounding wire from OEM eyelet.
7. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten

the connector. Repeat this procedure for all of the connections (**Figure 2**).

8. Install the new solenoids on the valve body (**Figure 1**). Place over the opening, insert solenoid bolts through the valve body and into threaded holes of solenoid housing. Start both bolts by hand, then tighten to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
  9. Make sure the O-ring is still on the upper surface of the valve body, at the place shown in (**Figure 1**).
  10. Reinstall the valve body into the transaxle, then insert the solenoid wiring harness case plug into the case. Be sure the notched part of the connector is in the proper place. Also, check that the lead wire isn't caught between case and valve body.
  11. Tighten the ten (10) valve body bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
  12. Install new filter, tighten four bolts to 6 to 6.5 Nm (4 to 5 ft. lbs.).
- Helpful Hint:** While installing the new filter, insert a pick (or paper clip) through the lock-up retaining plate, and work the valve while tightening filter bolts. This will keep the valve from binding.
- 
13. Install new oil pan gasket and oil pan, tighten bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
  14. Connect the negative battery cable.
  15. Fill unit with ATF and check for any leaks.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### DCC (LOCK-UP) SOLENOID for KM-175, -176 & -177 Series (late 1993-97) for F4A21-1, F4A22-2 & F4A23-2

PIONEER NUMBER **771035** 13 to 15 ohms

**NOTE:** This solenoid is used only in the DCC position on '93 Mitsubishi, and later Hyundai and Chrysler vehicles with a 13 ohm resistance. It will work for KM-175, 176 and 177 Series transmissions. **IF A 3 OHM RESISTANCE SOLENOID IS USED ON A SYSTEM REQUIRING A 13 OHM SOLENOID, THE COMPUTER WILL BE DAMAGED.** There are two methods to determine which ohms of resistance DCC (Lock-up) Solenoid is needed.

1. The most accurate method is to use a multi-meter to measure the resistance of the original lock-up solenoid.
2. If the external transmission wiring harness has a red wire with a black tracer (black stripe), a 13 ohm range solenoid is required. If the wire is solid red in color, it will require a 3 ohm range solenoid. The DCC Lock-up solenoid is the only solenoid with a resistance change. The EPC solenoid is 3 ohms of resistance.

1. **To Remove:** Disconnect the negative battery cable, drain the ATF out of unit, and remove the pan.
2. Remove the transmission filter. Note length of bolts.
3. Remove solenoid wiring harness case plug from case. Remove ten (10) valve body bolts, noting the different length bolts: 20 mm, 28 mm and 45 mm.
4. Remove valve body. The manual valve can come out – **be careful not to drop it.**
5. Remove solenoids from valve body, cut wires from old solenoid as close to metal base as possible. Keep track of solenoid wire locations to match correct solenoid wires back to the original solenoid positions (**Figure 1**).

**Figure 1**

6. **To Install:** Attach black ground wire with eyelet to the same bolt that was used originally. Cut original grounding wire from OEM eyelet.
7. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (**Figure 2**).

**Figure 2**

8. Install the new solenoids on the valve body (**Figure 1**). Place over the opening, insert solenoid bolts through the valve body and into threaded holes of solenoid housing. Start both bolts by hand, then tighten to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
9. Make sure the O-ring is still on the upper surface of the valve body, at the place shown in **Figure 1**.
10. Reinstall the valve body into the transaxle, then insert the solenoid wiring harness case plug into the case. Be sure the notched part of the connector is in the proper place. Also, check that the lead wire isn't caught between case and valve body.
11. Tighten the ten (10) valve body bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
12. Install new filter, tighten four bolts to 6 to 6.5 Nm (4 to 5 ft. lbs.).

**Helpful Hint:** While installing the new filter, insert a pick (or paper clip) through the lock-up retaining plate, and work the valve while tightening filter bolts. This will keep the valve from binding.

13. Install new oil pan gasket and oil pan, tighten bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
14. Connect the negative battery cable.
15. Fill unit with ATF and check fluid level with engine running and in "Park."

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### SHIFT SOLENOID for ZF4HP22 – 1984-88

PIONEER NUMBER **771036**  
Shift 26 to 40 ohms

For 5 Solenoid Valve Body ONLY

**NOTE:** There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.

Figure 1

- To Remove:** Remove transmission oil pan and filter. Remove wiring connector from case connector.
- Remove 13 valve body retaining bolts and remove valve body.
- With valve body on bench label each pair of wires.
- Remove original shift solenoids.

Figure 2

**5. To Install:** Install Teckpak/Fitzall solenoids (Figure 2). Use large connector for two wires, and use small connector for one wire. Reinstall pressure control solenoid housing to valve body. Cut wires on harness to achieve a proper wire length.

**6.** Strip back lead wires cut from the original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (Figure 3).

Figure 3

**7.** Reinstall valve body with 13 attaching bolts and torque to specification. Reinstall filter and transmission pan. Adjust fluid level and test drive.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### EPC SOLENOID for ZF4HP22 1984-88

For 5 Solenoid Valve Body ONLY

PIONEER NUMBER **771037** 3.5 to 4.66 ohms

**NOTE:** There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid.

- To Remove:** Remove transmission oil pan and filter. Remove wiring connector from case connector.
- Remove 13 valve body retaining bolts and remove valve body.
- With valve body on bench, label each pair of wires.
- Remove pressure control solenoid housing from valve body by removing three bolts (**Figure 1**).

- To Install:** Reinstall pressure control solenoid housing to valve body. Cut wires on harness to achieve a proper wire length.

6. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (**Figure 3**).

7. Reinstall valve body with 13 attaching bolts and torque to specification. Reinstall filter and transmission pan. Fill with ATF and check level. With engine running in "PARK", check for leaks.

8. Test drive the vehicle to perform shift test. After driving the vehicle, it may be necessary to make the shift firmer or softer. To accomplish this, adjust the force motor solenoid. You will need a 3/8" and 5/8" wrench.

**Caution:** Do not remove wrenches until adjustments are complete.

With one wrench on the adjuster and one on the lock nut, hold the 3/8" wrench still while breaking the 5/8" lock nut loose. Move the 3/8" adjuster one-sixth turn. To increase the pressure, turn clockwise. To decrease the pressure, turn counterclockwise. While still holding the 3/8" adjuster, tighten the 5/8" lock nut.

#### Line Pressures for ZFHP22:

Reverse	67-324

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS 4L60E Master Solenoid Kit 1993-95

PIONEER NUMBER **771038**

**IMPORTANT:** The only difference between 4L60E and 4L60E '96 early and late Master Kits is the 3-2 downshift control solenoid. Early is 9-14 ohms (two red wires). Late is 20-31 ohms (red and white wires).

**1. To Remove:** Unplug the solenoids. Label each pair of wires, so as not to confuse the shift solenoids on the rear of the transmission. The shift solenoids are held in place with a U-clip that must be removed from below in a journal in the valve body. Remove the transmission filter exposing the clip and the bolt on the force motor solenoid, the two bolts retaining the lock-up solenoids, and the U-shaped retaining clips for the PWM (or two PWMs on late model) solenoid. Cut the lock-up solenoid wires located in the pump as close to the solenoid as possible, and remove it from the pump. Do not cut the PWM and Shift connectors. Cut the wire connectors to the force motor solenoid as close as possible to the connector. Remove the solenoids from the transmission. See **Figure 1**.

**2. To Install:** It is suggested that Bolt "C" be replaced with the torx bolt from the kit to avoid a possible clearance problem (**Figure 1**). Reconnect the PWM and Shifts. Install the solenoids in the positions shown in **Figure 2**. The shift solenoids are held in place with a U-clip that must be inserted from below, in a journal in the valve body while the solenoid is held in place. The force motor solenoid is installed with a retaining clip and a 10 mm bolt. The PWM is the most difficult to install, because it is held in place with a U-clip that must be inserted from below into the journal in the valve body. Tighten all bolts according to normal OEM specifications.

Both A and B shift solenoids are the same. The PWM and the 3-2 PWM are also the same (**Figure 1**).

**3.** The wire pairs must be reconnected to the correct solenoid position. The lock-up solenoid located in the pump is the only solenoid with a diode. It must be wired for proper polarity: positive to positive and negative to negative.

**4.** The lock-up and force motor solenoids have Posi-Lock™ Connectors. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (**Figure 3**).

**5.** After driving the vehicle, you may make the shift firmer or softer by adjusting the force motor solenoid. Use a 3/8" and 5/8" wrench. **Caution:** Do not remove wrenches until adjustments are complete. With both wrenches on the adjuster and lock nut, hold 3/8" wrench still while breaking the 5/8" lock nut loose. Move the 3/8" adjuster one-sixth turn clockwise to increase the pressure or counterclockwise to decrease the pressure.

### Line Pressures FOR 4L60E:

Gear Range	Line Pressure
Drive, Park or Neutral	70-189
Reverse	80-324

These are idle pressures to wide open throttle pressures.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### 4L60E-96 Master Solenoid Kit – 1996-2000

PIONEER NUMBER **771039**

**IMPORTANT:** Because of the change in ohms of resistance in the 771031, this solenoid kit will work **ONLY** in '96-up vehicles. The only difference between 4L60E and 4L60E '96 early and late Master Kits is the 3-2 downshift control solenoid. Early is 9-14 ohms (two red wires). Late is 20-31 ohms (red and white wires).

**1. To Remove:** Unplug the solenoids. Label each pair of wires, so as to not confuse the shift solenoids on the rear of the transmission. Remove the transmission filter exposing the clip and the bolt on the force motor solenoid, the two bolts retaining the lock-up solenoids, and the U-shaped retaining clips for the shift solenoids and PWM (or two PWMs on late model) solenoid. Cut the lock-up solenoid wires located in the pump as close to the solenoid as possible, and remove it from the pump. Do not cut the PWM and Shift connectors. Cut the wire connectors to the force motor solenoid as close as possible to the connector. Remove the solenoids from the transmission (**Figure 1**).

**2. To Install:** It is suggested that Bolt "C" be replaced with the torx bolt from the Kit to avoid a possible clearance problem (**Figure 1**).

Reconnect the PWM and Shifts. Install the solenoids in the positions shown in

**Figure 2.** The shift solenoids are held in place with a U-clip that must be removed from below, into a journal in the valve body while the solenoid is held in place. The force motor solenoid is installed with a retaining clip and a 10mm bolt. The PWM is the most difficult to install, because it is held in place with a U-clip that must be inserted from below into a journal in the valve body. Tighten all bolts according to normal OEM specifications. Both **A** and **B**

shift solenoids are the same. The PWM and the 3-2 PWM are also the same (**Figure 1**). **NOTE:** Make sure shift solenoids **A** & **B** are pushed in all the way when installing U-clip.

The 3-2 Downshift solenoid is installed in the same manner as the PWM. This solenoid is identified by red and white wires. Install nearest to the manual valve (**Figure 1**). Tighten all bolts according to OEM specifications.

**3.** The wire pairs must be reconnected to the correct solenoid position. The lock-up solenoid located in the pump is the only solenoid with a diode. It must be wired for proper polarity; positive to positive and negative to negative. Both A and B shift solenoids are the same. The PWM and the 3-2 Downshift are different (**Figure 1**).

**4.** The lock-up and force motor solenoids have Posi-Lock™ Connectors. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out.

Tighten the connector. Repeat this procedure for all of the connections (**Figure 3**).

**5.** After driving the vehicle, if you wish to make the shift firmer or softer, simply adjust the force motor solenoid using a 3/8" and 5/8" wrench.

**Caution:** Do not remove wrenches until adjustments are complete. With both wrenches on the adjuster and lock nut, hold 3/8" wrench still while breaking the 5/8" lock nut loose. Move the 3/8" adjuster one-sixth turn clockwise to increase the pressure or counterclockwise to decrease the pressure.

#### Line Pressures for 4L60E:

These are idle pressures to wide open throttle pressures.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### 4L80E Master Solenoid Kit 1991-2000

PIONEER NUMBER **771040**

**NOTE:** There are no diodes in the OEM or 771040 solenoids. Therefore, it does not make any difference which wire is attached to which side of the solenoid.

Fig. 1

**1. To Remove:** Unplug the solenoids. Label each pair of wires on the harness so as to not confuse them. Remove the transmission filter, exposing the clip and the bolt on the force motor solenoid and the U-shaped retaining clip for the PWM solenoid. **Do not cut the PWM and Shift connectors.** Cut the wire connectors to the force motor solenoid as close as possible to the connector. Remove the force motor solenoid from the transmission (Figure 1).

**2.** When installing the shift solenoid in the B position, there is a clearance problem with one of the reverse servo bolts (Figure 2). Remove the bolt pictured that is directly under the B solenoid. Replace this bolt with the torx-head bolt furnished with the solenoid.

Figure 2

Cut off old connector Remove and Replace torx-head bolt

**3. To Install:** Install shift solenoids with wires at bottom pointing toward pan. Swivel bracket to align bolt hole. Reinstall the torx bolts (Figure 3), and reconnect harness to

Figure 3

solenoids. Install the force motor with the retaining clip and bolt. Install the U-clip, which must be inserted from below into a journal in the valve body. Tighten the bolts according to OEM specifications.

**4.** The force motor solenoid has a Posi-Lock™ Connector. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (Figure 4).

Figure 4

**5.** Adjusting the force motor solenoid. After driving the vehicle, if you wish to make the shift firmer or softer, simply adjust the force motor solenoid using a 3/8" and 5/8" wrench. **Caution: Do not remove wrenches until adjustments are complete.** With both wrenches on the adjuster and lock nut, hold 3/8" wrench still while breaking the 5/8" lock nut loose. Move the 3/8" adjuster one-sixth turn clockwise to increase the pressure or counterclockwise to decrease the pressure.

#### Line Pressures FOR 4L80E:

Gear Range	Line Pressure

Reverse	67-324

These are idle pressures to wide open throttle pressures.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### 4T60E

### Master Solenoid Kit – 1991-97

PIONEER NUMBER **771041**

**NOTE:** There are no diodes in the OEM or 771041 solenoids. Therefore, it does not make any difference which wire is attached to which side of the solenoid.

**1. To Remove:** Label each pair of wires on the harness. Unplug the shift and PWM solenoids. Cut the solenoid connectors off the harness as close to the connectors as possible.

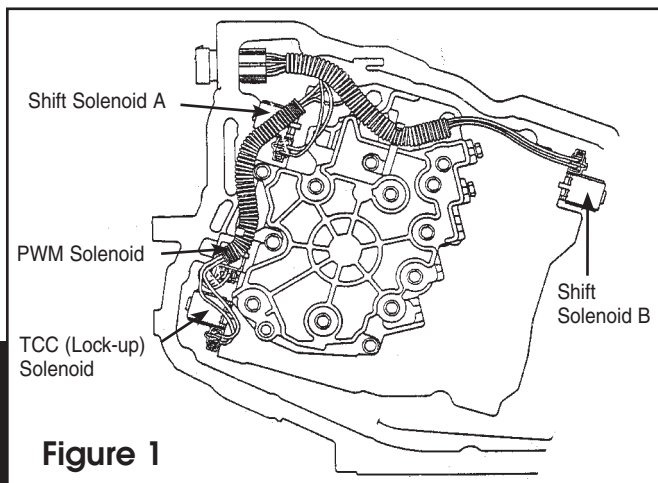

Figure 1

**2.** Remove the shift, lock-up, TCC, and PWM solenoids by removing the retaining clips and pulling them out. Note that the PWM solenoid has a larger retaining clip (Figure 2).

Figure 2

**3. To Install:** Press all of the solenoids into the valve body in the positions shown in Figure 1. Insert the clips. Make sure shift solenoids and A&B are pushed in all the way before installing U-clip. The new shift solenoids are interchangeable with each other, but the labeled wire pairs on the harness must be connected to the solenoid in the corresponding shift bore. The PWM has only one position.

**4.** Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (Figure 3).

**NOTE:** There may be a clearance problem between the pan and the PWM solenoid. If this occurs, bend the pan to accommodate the fit.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### A4LD Master Solenoid Kit – 1987-95

PIONEER NUMBER **771042**

**NOTE:** 1. There are no diodes in these solenoids, and polarity is not important. It makes no difference which wire is attached to which side of the solenoid. 2. 771001 3-4 Shift has a black back cover and the 771011 Lock-up has a silver back cover.

#### A4LD LOCK-UP SOLENOID

26 to 40 ohms..... PIONEER NUMBER **771011**

#### 3-4 SHIFT SOLENOID

26 to 40 ohms..... PIONEER NUMBER **771001**

**1. To Remove:** Before removing the valve body, label wire pairs. Unplug the electrical wires that attach the lock-up solenoid and the 3-4 solenoid leads. The valve body on all A4LD transmissions must be removed before any of the solenoids can be replaced.

**Caution:** During disassembly internal components will dislodge and fall out.

**2.** After the valve body has been removed, the separator plate must be removed. Now remove the retainer clips that keep the solenoids in place. Cut the wires as close as possible to both solenoids.

**3.** After the solenoids are removed, locate the aluminum sleeve/plug in the 3-4 solenoid bore position. Remove and discard.

**4. To Install:** Install the aluminum sleeve furnished in the kit (Figure 2). The solenoids and retaining clips now may be installed. When installing the separator plate and valve body, be sure to tighten all bolts to factory specifications.

**Figure 3**

**5.** Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (Figure 3).

**6.** Install the "Y" connector (Figure 4), to the positive center wire, so there will be voltage to both solenoids. The lock-up solenoid has red wires, and the 3-4 solenoid has blue wires. The easiest way to keep track of wire location is to remember the positive center wire goes to both solenoids. The wire located to the rear of the transmission is the lock-up ground. The lock-up solenoid is located nearest the front of the transmission. The wire located closest to the front of the transmission is the 3-4 ground. This is the solenoid located to the rear of the transmission. Make wire connections as shown in Figures 3 and 4.

**Figure 4**

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS

### ZF4HP22 Master Solenoid Kit

PIONEER NUMBER **771047** 1984-88

**NOTE:** This kit is for 5 solenoid valve body ONLY.  
Will not work on 4 solenoid valve body.

**NOTE:** There are no diodes in the OEM or 771047 solenoids.  
Therefore, it does not make any difference which wire is  
attached to which side of the solenoid.

- To Remove:** Remove transmission oil pan and filter. Remove wiring connector from case connector.
- Remove 13 valve body retaining bolts and remove valve body.
- With valve body on bench, label each pair of wires. Wire length can be adjusted after the Solenoid Master Kit is installed.
- Remove pressure control housing from valve body by removing three bolts. This will allow removal and installation of all solenoids (**Figure 1**).

- Remove original solenoids and install solenoids (**Figure 2**). Use large Posi-Lock™ connector for two wires and small Posi-Lock™ connector for one wire. Reinstall pressure control solenoid housing to valve body. Cut wires on harness to achieve a proper wire length.
- Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (**Figure 3**).

- To Install:** Reinstall valve body with 13 attaching bolts and torque to specification. Reinstall filter and transmission pan. Adjust fluid level and test drive.
- Adjusting the force motor solenoid. After driving the vehicle, if you wish to make the shift firmer or softer, simply adjust the force motor solenoid using a 3/8" and 5/8" wrench. **Caution: Do not remove wrenches until adjustments are complete.** With both wrenches on the adjuster and lock nut, hold 3/8" wrench still while breaking the 5/8" lock nut loose. Move the 3/8" adjuster one-sixth turn clockwise to increase the pressure or counterclockwise to decrease the pressure.

# ELECTRICAL COMPONENTS

## INSTALLATION INSTRUCTIONS Master Solenoid Kit

### FITS KM-175, -176 & -177 Series FOR F4A21-1, F4A22-2, F4A23-2

'87-'97 for Hyundai, '85-'92 & early '93 Mitsubishi and Chrysler

PIONEER NUMBER **772050**

**NOTE:** These solenoids will work for KM-175, -176 and -177 Series transmissions. The 3 ohm solenoid will work on all year models in the EPC position. It also is used in the DCC position on Mitsubishi vehicles prior to '93, and on later Hyundai and Chrysler vehicles. **IF A 3 OHM RESISTANCE SOLENOID IS USED ON A SYSTEM REQUIRING A 13 OHM SOLENOID, THE COMPUTER WILL BE DAMAGED.** There are two methods to determine which ohms of resistance DCC (lock-up) solenoid is needed.

1. The most accurate method is to use a multi-meter to measure the resistance of the original lock-up solenoid.
2. If the external transmission wiring harness has a red wire with a black tracer (black stripe), a 13 ohm range solenoid is required. If the wire is solid red in color, it will require a 3 ohm range solenoid.

The DCC Lock-up solenoid is the only solenoid with a resistance change. The EPC solenoid is 3 ohms of resistance.

**NOTE:** For '85-'88 Mitsubishi Galant (2.4 L engine) KM 175-1, an aluminum plug/gasket adapter will be required. If you can see through the valve body where the Pressure Control and/or Lock-up solenoids seat, call our Hotline for a free-of-charge adapter and gasket.

1. **To Remove:** Disconnect the negative battery cable, drain the ATF out of unit, and remove the pan.
2. Remove the transmission filter. Note length of bolts.
3. Remove solenoid wiring harness case plug from case. Remove ten (10) valve body bolts, noting the different length bolts: 20mm, 28mm and 45mm.
4. Remove valve body. The manual valve can come out – **be careful not to drop it.**
5. Remove solenoids from valve body, cut wires from old solenoid as close to metal base as possible. Label the solenoid wire locations to match correct solenoid wires back to the original solenoid positions (**Figure 1**).

6. **To Install:** Attach black ground wire with eyelet to the same bolt that was used originally. Cut original grounding wire from OEM eyelet.

7. Strip back wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (**Figure 2**).

8. Install the new solenoids on the valve body. Place over the opening, insert solenoid bolts through the valve body and into threaded holes of solenoid housing. Start both bolts by hand, then tighten to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
9. Make sure the O-ring is still on the upper surface of the valve body, at the place shown in Figure 1.
10. Reinstall the valve body into the transaxle, then insert the solenoid wiring harness case plug into the case. Be sure the notched part of the connector is in the proper place. Also, check that the lead wire isn't caught between case and valve body.
11. Tighten the ten (10) valve body bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
12. Install new filter, tighten four bolts to 6 to 6.5 Nm (4 to 5 ft. lbs.).

**Helpful Hint:** While installing the new filter, insert a pick (or paper clip) through the lock-up retaining plate, and work the valve while tightening filter bolts. This will keep the valve from binding.

13. Install new oil pan gasket and oil pan, tighten bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).
14. Connect the negative battery cable.
15. Fill unit with ATF and check for any leaks.

## INSTALLATION INSTRUCTIONS

### Master Solenoid Kit FITS KM-175, -176 & -177 Series FOR F4A21-1, F4A22-2, F4A23-2 Late 1993-98 Mitsubishi and Chrysler

PIONEER NUMBER **772051**

**NOTE:** These solenoids will work for KM-175, 176 and 177 Series transmissions. The 3 ohm solenoid will work on all year models in the EPC position. It is also used in the DCC position on Mitsubishi vehicles prior to '93, and on later Hyundai and Chrysler vehicles. **IF A 3 OHM RESISTANCE SOLENOID IS USED ON A SYSTEM REQUIRING A 13 OHM SOLENOID, THE COMPUTER WILL BE DAMAGED.** There are two methods to determine which ohms of resistance DCC (Lock-up) Solenoid is needed.

1. The most accurate method is to use a multi-meter to measure the resistance of the original lock-up solenoid.
2. If the external transmission wiring harness has a red wire with a black tracer (black stripe), a 13 ohm range solenoid is required. If the wire is solid red in color, it will require a 3 ohm range solenoid. The DCC Lock-up solenoid is the only solenoid with a resistance change. The EPC solenoid is 3 ohms of resistance.

**1. To Remove:** Disconnect the negative battery cable, drain the ATF out of unit, and remove the pan.

2. Remove the transmission filter. Note length of bolts.

3. Remove solenoid wiring harness case plug from case. Remove ten (10) valve body bolts, noting the different length bolts: 20mm, 28mm and 45mm.

4. Remove valve body. The manual valve can come out – **be careful not to drop it.**

5. Remove solenoids from valve body, cut wires from old solenoid as close to metal base as possible. Label the solenoid wire locations to match correct solenoid wires back to the original solenoid positions (Figure 1).

**6. To Install:** Attach black ground wire with eyelet to the same bolt that was used originally. Cut original grounding wire from OEM eyelet.

7. Strip back lead wires cut from the old solenoid and original solenoid harness approximately 1/2" and twist braided wire to form a tight strand. Loosen the Posi-Lock™ Connectors. Insert the bare wire into the connector until it bottoms out. Tighten the connector. Repeat this procedure for all of the connections (Figure 1).

8. Install the new solenoids on the valve body. Place over the opening, insert solenoid bolts through the valve body and into threaded holes of solenoid housing. Start both bolts by hand, then tighten to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).

**Figure 2**

9. Make sure the O-ring is still on the upper surface of the valve body, at the place shown in Figure 1.

10. Reinstall the valve body into the transaxle, then insert the solenoid wiring harness case plug into the case. Be sure the notched part of the connector is in the proper place. Also, check that the lead wire isn't caught between case and valve body.

11. Tighten the ten (10) valve body bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).

12. Install new filter, tighten four bolts to 6 to 6.5 Nm (4 to 5 ft. lbs.).

**Helpful Hint:** While installing the new filter, insert a pick (or paper clip) through the lock-up retaining plate, and work the valve while tightening filter bolts. This will keep the valve from binding.

13. Install new oil pan gasket and oil pan, tighten bolts to 10 to 11.5 Nm (7.5 to 8.5 ft. lbs.).

14. Connect the negative battery cable.

15. Fill unit with ATF with the engine running and in "PARK", check fluid level and leaks.

Part	Category	Manufacturer	Transmission	Year
771031	Solenoid	GM	4L60, 4L60E, 4L65E, 4L70E (TH700-R4) 4 Speed RWD / 4x4	1996-06
771032	Solenoid	Ford	AXOD, AXODE, AX4N, AX4S, AX4SH	1986-91
771033	Solenoid	Mitsubishi, Hyundai, Chrysler	KM170, KM173, KM171, KM175, KM175-5 (K4A22-1, 2) KM176, KM176-5 (F4A21-2) KM177, KM177-8 (F4A23-2) 4 Speed	1983-99
771034	Solenoid	Mitsubishi, Hyundai, Chrysler	KM170, KM173, KM171, KM175, KM175-5 (K4A22-1, 2) KM176, KM176-5 (F4A21-2) KM177, KM177-8 (F4A23-2) 4 Speed	1983-93
771035	Solenoid	Mitsubishi, Hyundai, Chrysler	KM170, KM173, KM171, KM175, KM175-5 (K4A22-1, 2) KM176, KM176-5 (F4A21-2) KM177, KM177-8 (F4A23-2) 4 Speed	1993-99
771036	Solenoid	ZF	ZF3HP22, ZF4HP22/24	1984-02
771037	Solenoid	ZF	ZF3HP22, ZF4HP22/24	1984-02
771038	Solenoid Kit	GM	4L60, 4L60E, 4L65E, 4L70E (TH700-R4) 4 Speed RWD / 4x4	1993-95
771039	Solenoid Kit	GM	4L60, 4L60E, 4L65E, 4L70E (TH700-R4) 4 Speed RWD / 4x4	1996-01
771040	Solenoid	GM	4L80E, 4L85E 4 Speed RWD / 4x4	1991-06
771041	Solenoid	GM	4T60, 4T60E, 4T65E, (TH440-T4)	1991-06
771042	Solenoid	Ford	A4LD	1985-95
771047	Solenoid	ZF	ZF3HP22, ZF4HP22/24	1984-02
771048	Solenoid	Toyota	A240E, A240L, A241E, A241L, A241H, A243L, A244E, A245E, A245E, A246E	1985-02
771049	Solenoid	Toyota	A240E, A240L, A241E, A241L, A241H, A243L, A244E, A245E, A245E, A246E	1985-02
771050	Solenoid	Toyota	A340E, A340H, A340F, AW4, A341E, 30-40LE	1985-02
771051	Solenoid	Toyota	A540E, A540H, A541E	1988-04
771052	Solenoid	Ford	AOD, AODE, 4R70W (AODE-W)	1998-08
771053	Solenoid	Ford	AOD, AODE, 4R70W (AODE-W)	1998-08
771054	Solenoid	Ford	AXOD, AXODE, AX4N, AX4S, AX4SH	1997-06
771055	Solenoid	Ford	4EAT TYPE F (1 PAN)	1990-96
771057	Solenoid	Ford	4EAT TYPE F (1 PAN)	1990-06
771058	Solenoid	Ford	4EAT TYPE F (1 PAN)	1990-06
771059	Solenoid	GM	4L60, 4L60E, 4L65E, 4L70E (TH700-R4) 4 Speed RWD / 4x4	1996-06
771060	Solenoid	GM	4L60, 4L60E, 4L65E, 4L70E (TH700-R4) 4 Speed RWD / 4x4, 4T40E 4 Speed FWD, 4T60, 4T60E, 4T65E, (TH440-T4), 4T80-E	1992-06
771061	Solenoid	GM	4T60, 4T60E, 4T65E, (TH440-T4)	1998-06
771062	Solenoid	GM	4L80E, 4L85E 4 Speed RWD / 4x4	1991-06
771063	Solenoid	Chrysler	30RH (A904 Torque Flite 6), 30RH (Baby 904), 31RH (A998), 32RH (A999), 36RH (A727 Torque Flite 8), 37RH (A727HD), 40RH (A500), 42RH (A500), 42RE (A500SE), 44RE, 46RE, 46RH (A518, ES), 47RE, 47RH, 48RE (A618, ES) 4 Speed RWD / 4x4	1989-95
771064	Solenoid	Chrysler	30RH (A904 Torque Flite 6), 30RH (Baby 904), 31RH (A998), 32RH (A999), 36RH (A727 Torque Flite 8), 37RH (A727HD), 40RH (A500), 42RH (A500), 42RE (A500SE), 44RE, 46RE, 46RH (A518, ES), 47RE, 47RH, 48RE (A618, ES) 4 Speed RWD / 4x4	1996-06
771065	Solenoid	Chrysler	30RH (A904 Torque Flite 6), 30RH (Baby 904), 31RH (A998), 32RH (A999), 36RH (A727 Torque Flite 8), 37RH (A727HD), 40RH (A500), 42RH (A500), 42RE (A500SE), 44RE, 46RE, 46RH (A518, ES), 47RE, 47RH, 48RE (A618, ES) 4 Speed RWD / 4x4	1995-98
771066	Solenoid	Chrysler	30RH (A904 Torque Flite 6), 30RH (Baby 904), 31RH (A998), 32RH (A999), 36RH (A727 Torque Flite 8), 37RH (A727HD), 40RH (A500), 42RH (A500), 42RE (A500SE), 44RE, 46RE, 46RH (A518, ES), 47RE, 47RH, 48RE (A618, ES) 4 Speed RWD / 4x4	1989-93
771067	Solenoid	Nissan, Mazda	RE4R01A, RL4R01A, R4A-EL	1989-05
771068	Solenoid	Nissan, Isuzu	JR403E, RG4R01A, JATCO, RE4R03A	1990-98
771068	Solenoid	Nissan, Mazda	RE4R01A, RL4R01A, R4A-EL	1989-05

# NUMERICAL LISTING

Part	Category	Manufacturer	Transmission	Year
771069	Sensor	Ford	AOD, AODE, 4R70W (AODE-W)	1997-08
