Allow for ventilation clearance.

**Figure 12**

**TWEETER ATTENUATION SWITCH**

A 3-position switch (-3dB, 0dB, +3dB ) allows you to adjust tweeter level for the tonal balance that's right for your car and system.

**Figure 13**

**TWEETER ATTENUATION WIRE LOOP**

Cut this wire to reduce tweeter level 3dB.

## ENGLISH

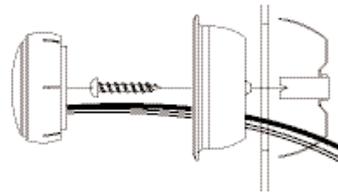

---

### DB6501 & DB5251

**Figure 14**  
**Flush Mount**

#### TWEETER MOUNTING

1. Check for proper clearance: The flush mount kit is 7/8" (22.2mm) deep.
2. Mark the center of the spot and cut a 2" (50.8mm) diameter hole using a hole saw, drill bit or razor knife.
3. Assemble the cup, clamp and machine screw loosely as shown.
4. Route wires through the round opening in the bottom of the cup.
5. Press the assembly into the 2" (50.8mm) diameter hole until the clamp edge is below the mounting surface, then tighten the screw. The legs of

the clamp can be bent outward by inserting a screwdriver through the holes in the cup while still mounted.

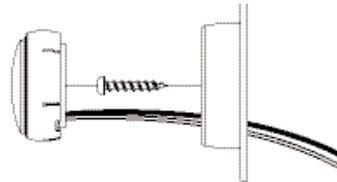

6. Connect wires from the tweeter terminals of the Crossover to the tweeter itself using the faston connectors. Connect the red wire from the (+) terminal of the Crossover tweeter output to the red (+) wire from the tweeter.
7. Mount the tweeter by snapping it into the mounting cup.

### DB6501 & DB5251

**Figure 15**  
**Surface Mount**

#### TWEETER MOUNTING

1. Using the base of the surface mount cup as a template, mark the screw hole and drill them using a 1/8" (3mm) drill bit. Drill a second hole (for the speaker wire) using a 3/16" (5mm) drill bit.
2. Screw surface mount cup to the panel.
3. Push the tweeter wires through the open area at the bottom of the cup and through the 3/16" (5mm) hole in the panel.

4. Connect wires from the tweeter terminals of the Crossover to the tweeter wires using faston connectors. Be sure to connect the red wire strand from the tweeter to the (+) terminal of the crossover tweeter output.
5. Mount the tweeter by snapping it into the mounting cup.
