Please read all instructions carefully before assembly, installation and/or use of this product.

DO NOT USE WITH CROSSBAR SPREAD LESS THAN 24”.

WARNING:
- Do not exceed the weight limit of your vehicle’s roof racks, check manufacturer’s rating before use.
- Improper mounting and/or use of this product will void the warranty. Please follow instructions carefully.
Kit Contents

A J-RAC x2
B BUCKLE COVER x2
C CAM BUCKLE STRAP – 13FT x2
D TIE DOWN ROPE – 13FT x2
E STEEL HOOK x2
F CLAMP BRACKET x2
G CLAMP KNOB x4
H CARRIAGE BOLT x4
Installation Instructions

1. Prior to installing your new J-Rac Kayak Carrier, be sure your crossbars are clean and free of debris. Clean crossbars will help to ensure a proper fit and will help to keep the rack from slipping.

2. Unscrew and remove both Clamp Knobs (G) from the bottom of the J-Rac to loosen the clamp bracket (F).

3. Remove the clamp bracket (F) from the bottom of the J-Rac.

4. Set the J-Rac on the top of your front crossbar and hold it in place.
Installation Instructions

5
Push the clamp bracket (F) against the bottom of your crossbar, underneath the J-Rac, and feed the carriage bolts (H) down through the holes of the clamp bracket.

6
Screw the clamp knobs (G) back onto the carriage bolts (H) until snug, but do not tighten down.

7
Repeat steps 2 - 6 for securing the second J-Rac to the rear crossbar. Ensure that your crossbars are a minimum 24” apart from each other (the further apart, the more stable your watercraft will be).

8
Align the J-Racs, making sure the placement is the same on the front and rear crossbars.
Installation Instructions

9

Once alligned (Step 8), **SECURE BOTH J-RACs COMPLETELY** by tightening the clamp knobs.

10

Your ROLA J-Rac is equipped with foam pads to protect your vessel from scratches during transport. For increased protection—especially for hulls with high-lacquer finishes—use a soft cloth for added protection.

11

Feed the Cam Buckle Strap (C) through the Cam Buckle Cover (B), leaving the cam buckle exposed at the end.

12

Loop the Cam Buckle Strap (C) through the top of the J-Rac on the front crossbar and knot.
Installation Instructions

13. Load the watercraft and hang both ends of the strap up and over the kayak as shown.

14. Slip the end of the strap (C) under the front crossbar then insert into the cam buckle. Pull downward to tighten completely until watercraft is secure.

15. Slide the Cam Buckle Cover over the Cam Buckle to protect watercraft during transport. Repeat steps 11-15 for securing the watercraft to the J-Rac on the rear crossbar.

16. Feed one end of Rope (D) through the hole in Hook (E) and knot.
Installation Instructions

17
Hook the rope to a metal surface on bumper, tow loop, or frame hole using Hook (E).

18
Feed other end of Rope (D) through the grab handle or rescue bar on the rear of the watercraft, pull until the rope is tight, then knot to secure. Tie off any excess rope.

19
Secured watercraft should look as shown.

Repeat steps 16-18 for securing the watercraft to the front of the vehicle.

CAUTION

BEFORE DRIVING:
• Test movement by rocking watercraft side to side
• Tighten if loose
• READ ALL PRECAUTIONS BELOW
**WEIGHT LIMIT**

No more than 165 lbs. (75 kg) unless noted otherwise.

*Some vehicles will be rated lower than 165 lbs. – please consult your owner’s manual before loading.

**ANTENNA WARNING:**
Antenna on vehicle roof may cause interference with long loads. Consult vehicle owner’s manual on proper removal of the antenna.

**REAR HATCH WARNING:**
Longer loads could prevent vehicle’s rear hatch from opening. Always use caution when opening rear hatch.

**IF YOU REMOVE THE CARRIER FROM YOUR VEHICLE, PLEASE FOLLOW THE INSTRUCTIONS TO INSTALL AGAIN.**

**MAINTENANCE:**
To clean, use a soft cloth with water and mild detergent.

⚠️ **KEEP THESE INSTRUCTIONS ⚠️**
