

# SPICER®

## Commercial Vehicle/Heavy-Duty

# 10 Series™ U-Joints

### Tested and Proven for Top Performance.

Spicer consistently delivers the highest quality, and Spicer 10 Series™ u-joints are no exception. Longer life, less downtime—that's the Spicer difference. Plus, 10 Series u-joints are completely interchangeable with existing parts, so you get total product compatibility with no change in part numbers.

Spicer 10 Series u-joints are engineered for a tighter fit, delivering better balance capability, reduced driveline vibration and lower maintenance costs. We do this by combining a computer-designed bearing plate with a patented manufacturing process that closely controls tolerances. It's a commitment to exceptional design and production that has made Spicer the name people have trusted for more than a century.

See reverse for the features and benefits of Spicer 10 Series u-joints.

# Spicer® Commercial Vehicle/Heavy-Duty 10 Series™ U-Joints

## Superior Performance—Backed by Testing.

Genuine Spicer parts are manufactured to the same high standards as OE parts—because they are OE parts. That's your assurance that you're getting the same or better quality than the parts you're replacing.

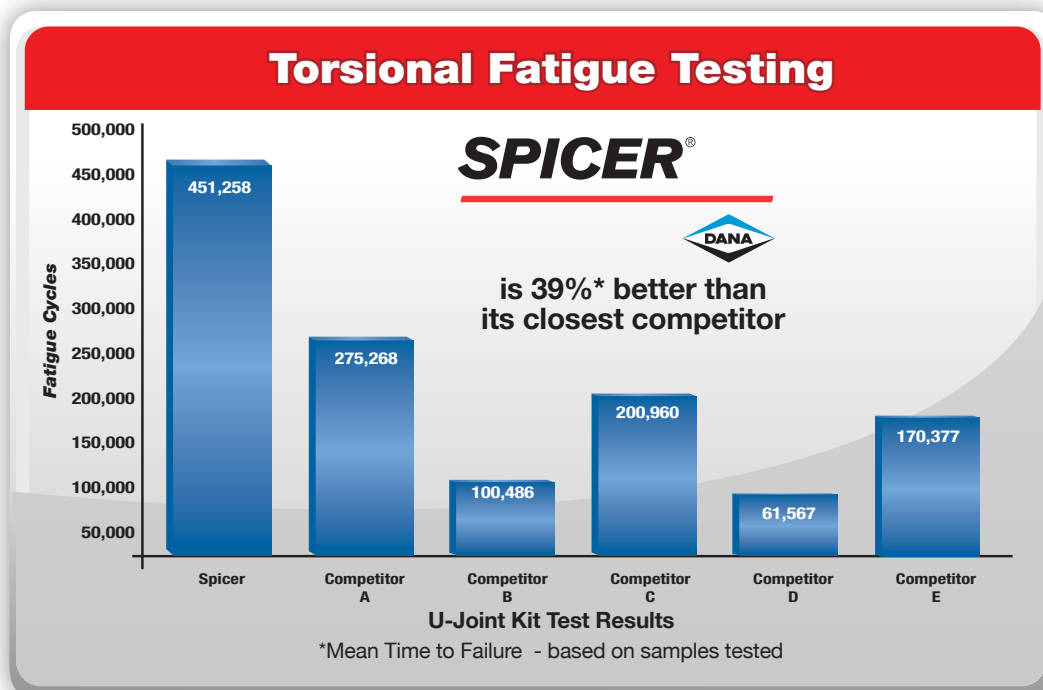

### See what makes Spicer 10 Series U-joints superior.

- Zerks are positioned at 180°, so lubrication can be done without rotating the driveshaft. You save maintenance time and costs!
- One zerk is always exposed, which greatly reduces the chance of missed lubrication.
- Case hardening inside and out increases durability, ruggedness and strength.
- Long life seals resist heat and maintain lubrication at all speeds.

### Spicer outperforms the others in competitive testing.

When it comes to torsional fatigue capability, no other competitor even comes close to the Spicer 10 Series u-joint. Spicer u-joints are consistently stronger, helping ensure longer life and better performance. See the results in the chart below.
