DANA
44™

PROVING GROUND FOR THE
ULTIMATE DANA 44™ AXLES

This 2012 Jeep Wrangler Sahara originally came with the standard Dana 30™ axle in the front and the Dana 44™ axle in the rear. Initially Dana upgraded this Jeep to Ultimate Dana 60™ front and rear axles—the first axles to bear the Ultimate Dana name. With Ultimate Dana 60™ axles in place, they took this Jeep to the Easter Jeep Safari in Moab, Utah, one of the most grueling testing grounds in the United States. Along the way, we've added rock sliders, a suspension lift, a bigger light bar and more because, let's face it, we're Jeep guys at heart too.

Once the development of the Ultimate Dana 44™ front axle was complete, this Jeep Wrangler Sahara took it out into the field. Once again, we tested the strength and durability of this axle right out in the same places Jeep enthusiasts congregate.
