

THE
ULTIMATE

FOR THE JEEP® WRANGLER® JK

FULLY UPGRADED FROM THE AXLES UP.

If you've been to a Jeep event recently, chances are you've seen the Dana Aftermarket Group and the Spicer brand there as well. That's because our team knows that being shoulder to shoulder with the people who live and breathe Jeep is what inspires us to keep innovating. We see what you put your Jeeps through, look at the ways you're modifying your vehicles, and take what we see back to our teams of engineers—so that we can help you get even more out of your Jeep.

That's the guiding principle behind the Ultimate Dana 60™ front and rear axles, which you'll find on our 2015 Jeep Wrangler Rubicon that has been retrofitted with Ultimate Dana 60™ axles and other cool modifications. Ultimate Dana 60™ axles are loaded with features that Jeep enthusiasts have been implementing over the years, including Warn® hub locks, nodular iron diff covers, and more. Our Ultimate Dana 60™ Jeep Wrangler follows that lead, with all kinds of modifications throughout, including a lift kit and an LS3 Stage 2 motor built for a Corvette.
