

XTEND+CLIMB

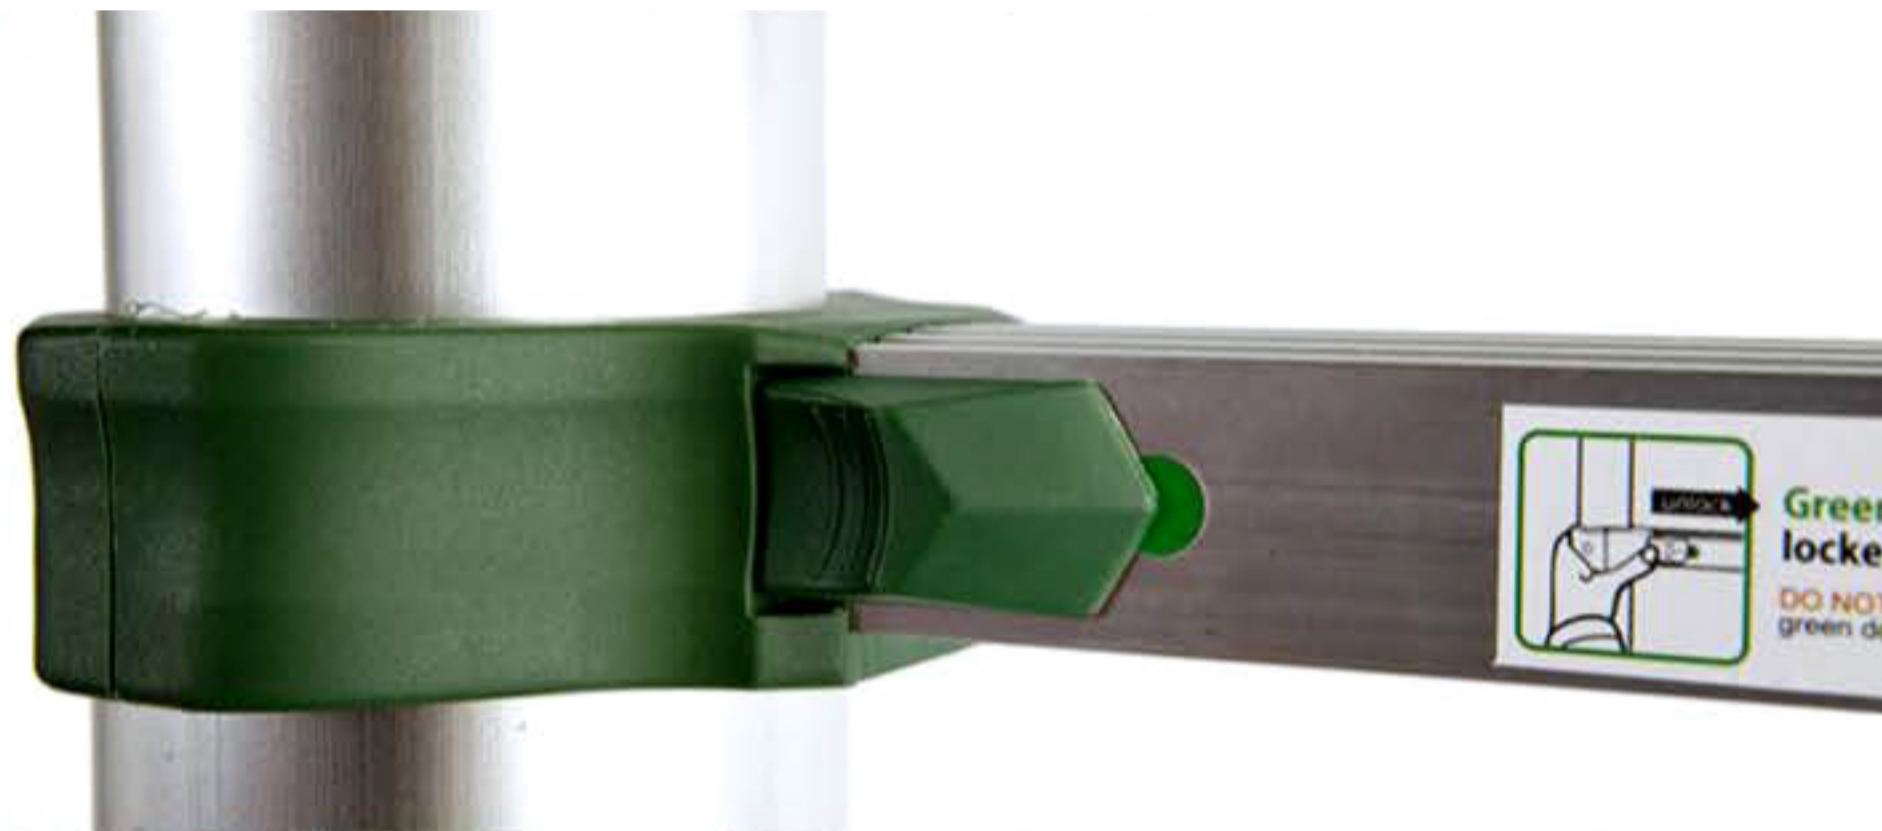

TRUE TELESCOPING TECHNOLOGY

True Telescoping Technology™ is the patented technology behind Xtend+Climb's series of telescoping ladders. Xtend +Climb® believes that true telescoping technology is not just what defines their innovation in climbing but it sets the standard for why our telescoping ladders are beneficial to consumers. Ladders with True Telescoping Technology™ are the only ladders in the world that extend and lock by the foot to the user's desired height. This not only provides maximum versatility, but achieves a higher level of safety than most telescoping ladders.

LIGHTWEIGHT

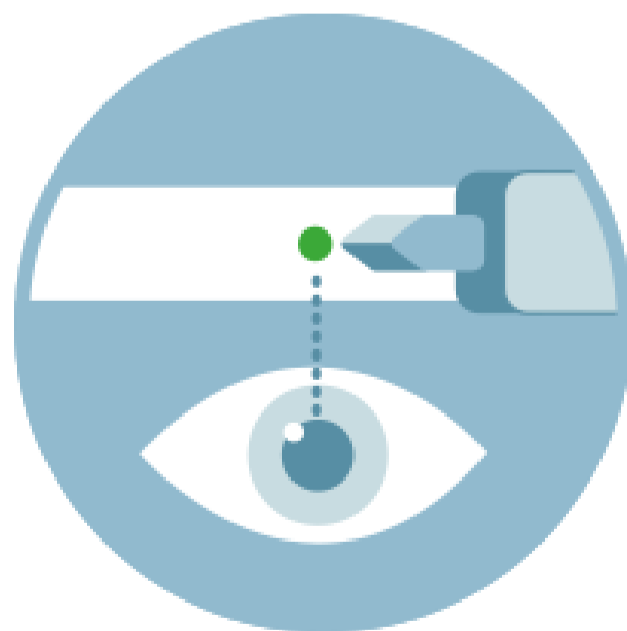

Thanks to True Tele Tech you can carry a ladder with one hand. Imagine cutting multiple trips down to one – and saving time on site.
